Since its launch in 2008, the Global Observatory on Local Democracy and Decentralization (GOLD) report has been UCLG’s key publication and global knowledge depositary on local and regional governments. The fifth and latest edition of the GOLD report focused on the localization of the global agendas and the impact of local actions around the world. Derived from the GOLD V report, this publication provides a more in-depth examination and insightful perspective of the realities on the ground in the Asia-Pacific region.

UCLG ASPAC attaches great importance to this report. As home to 54% of the world’s population, the Asia-Pacific region comprises approximately 437,000 local and regional governments (LRGs), the largest concentration in the world before Europe (100,000). Our region is indeed a driving force for global development and its sustainability lies in our responsibilities. The United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP) 2019 report of progress on Sustainable Development Goals (SDGs) implementation acknowledged the progress made in the region. However, it also made an alarming observation that the current trajectory will not enable the Asia-Pacific region to achieve any of the SDGs by 2030. We have only 10 years left to reach 2030; we need to act together and urgently turn this slowed-down trend into fast-tracked progress.

The complexity and diversity of challenges that come with the size of the Asia-Pacific region have caused uneven levels of achievement in SDG localization. Yet at the same time, this has stimulated innovative attempts and initiatives to accelerate progress. The GOLD V report offers an opportunity for LRGs to showcase and take stock of the best practices in the region, as well as to advance their own efforts in achieving the SDGs. The awareness of the realities captured in the GOLD V report strengthens our united call to national governments to provide an enabling institutional environment for LRGs. It also opens up more channels for dialogue and stronger collaboration with civil society and other stakeholders including private sector.

LRGs in the Asia-Pacific region have played a central role in the achievement of the SDGs. UCLG ASPAC will continue to foster the concerted and accelerated efforts with all levels of government and civil society in order to create a sustainable future for all.

In 2015 and 2016, world leaders came together to set a historic milestone in multilateral cooperation with the adoption of global agreements towards sustainable development. The 2030 Agenda and the 17 Sustainable Development Goals, the New Urban Agenda, the Paris Agreement on climate change, the Sendai Framework on Disaster Risk Reduction and the Addis Ababa Action Agenda on Financing for Development all showcased a global will to respond to today’s global challenges through the adoption of a firm rights-based approach.

Local and regional governments (LRGs) have risen to the scale of the challenge, demonstrating their commitment to the realization of the global agendas by putting in place elaboration, adoption and implementation processes. From their perspective, the global agendas are interlinked and cannot be achieved in isolation: all sustainability actions to address the highly interrelated challenges affecting our territories and cities must be fully integrated and comprehensive. The 2030 Agenda has been widely embraced across territories and represents a significant step forward in terms of ambition, universality and complexity with respect to the Millennium Development Goals (MDGs). The interconnectedness of the Sustainable Development Goals (SDGs) provides, on the one hand, our best shot at tackling the multi-dimensional challenges facing our societies. On the other, it requires a significant step up in policy-making efforts and the adoption of a truly integrated approach that ensures that ‘no one and no place are left behind’ — in other words, the UN ‘whole-of-government’ and ‘whole-of-society’ approach to development (see Box 1), encompassing a truly multilevel and multi-stakeholder governance system that puts people at the centre of development (see Box 2).

We currently stand at the end of the first quadrennial cycle of implementation of the SDGs, which means that the worldwide state of implementation of each SDG has been evaluated at least once. Consequently, the international community is taking this time to take stock of the progress made, the trends that have emerged and the challenges encountered over these past four years, and these will be discussed at the

---

**Box 1**

‘Whole-of-government’ and ‘whole-of-society’ approaches

Multilevel and collaborative governance frameworks that emphasize the need to approach policy-making processes in an integrated way, factoring in all government bodies and members of society. Adopting these approaches is critical for advancing sustainable development, since they constitute the basis for policy coherence (see Box 7) by requiring policy-making to happen in an integrated manner beyond institutional siloes, promoting synergies and improving public accountability. Putting governance frameworks in place requires the establishment of adequate coordination and participation mechanisms that ensure that sub-national governments (SNGs) and members of society take part effectively in policy design, implementation and monitoring processes at all levels of government.

---
dramatically as the intensity of climate change. The loss of biodiversity continues to accelerate responsible for, also continue to increase, while gas (GHG) emissions, 70% of which cities are.

2019, a trend observed since 2016. Greenhouse transformation to meet the Goals by 2030. The pace and scale required to trigger the necessary sustainability paradigm is not taking place at the territories. However, the shift towards a new equality targets and access to electricity in poor continue to decrease, while progress has been made with respect to health, certain gender elderly, people with disabilities, ethnic and sexual minorities, amongst others). Moreover, although the means of implementation are progressing, finance for sustainable development remains an ongoing issue. Institutions often depleted by territorial conflict are not robust enough to respond to the magnitude of the interrelated challenges they face.

As stressed by the UN Secretary-General (UNSG), the current social, economic and environmental trends that are shaping the world have a major impact on the realization of the SDGs and present a daunting challenge in terms of meeting the Goals in the mandated time. The UNSG identifies five such trends — urbanization, demographic change, climate change, protracted crises and frontier technologies. The interactions, synergies and trade-offs between these trends give rise to highly complex and interconnected policy-making environments at local, national and international levels. One of the main objectives of the GOLD V Report has been to examine how LRGs are contributing to the achievement of the global agendas in the face of such trends. These agendas — and the commitment of LRGs to achieving them — are changing our societies and promoting the evolution of good governance and citizen participation in highly diverse contexts all around the world. It is therefore critical to take this time to better understand where LRGs stand with respect to SDG implementation, and to revisit policy-making processes in order to take full advantage of the mutually reinforcing potential of global agendas and local processes as catalysts for change. The aim of the GOLD V Report is to contribute to such an endeavour, looking at how to promote integrated policies and actions that meet today’s challenges from the local and regional perspective.

The report highlights how, as part of their day-to-day responsibilities, LRGs are implementing policies and carrying out actions which although not always officially ‘SDG-labelled’, have a direct impact on populations’ access to infrastructure, services and life opportunities. As acknowledged by the UN General Assembly, the UNSG and the Habitat III consensus, the decarbonization of our economies and ensuring access to energy, water, food, transport and infrastructure will ultimately be achieved through project-level investments that take place mostly at the sub-national level and are led by LRGs. It is thus crucial to build up a critical mass of knowledge about how territories and cities are progressing towards sustainability, what initiatives are being put forward and what obstacles are being encountered if we are to achieve the SDGs and other global agendas.

One of the main transformations humanity is experiencing is the rapid urbanization of society, and in this respect LRGs find themselves increasingly at the centre of many crucial challenges. The percentage of the world’s population living in urban areas is expected to rise from 55% to nearly 70% by 2050 — an increase of 2.3 billion urban dwellers likely to be concentrated in low and lower middle-income territories where urbanization is happening at the fastest rate. Changes in population growth, age composition and migration patterns heavily impact urbanization pathways and those of the surrounding territories, cutting across a wide range of SDGs — for example poverty eradication, access to food and water, health, gender equality, economic growth and decent work, the reduction of inequalities and promoting sustainable cities.

**Box 2**

**Multilevel governance**

A decision-making system based on coordination mechanisms that allow the allocation of competences and responsibilities of government both vertically and horizontally in accordance with the principle of subsidiarity (see Box 6) and that respect local autonomy. This system recognizes that there is no optimal level of decentralization (see Box 5) and that implementation and competences are strongly context-specific: complete separation of responsibilities and outcomes in policy-making cannot be achieved and different levels of government are interdependent. Multilevel governance necessitates all levels sharing information and collaborating fully, so that every level can publicly and accountably lead horizontal relations with respective stakeholders to optimize policy outcomes.

that are better articulated with their hinterlands — which significantly influences the prospects for SDG implementation. At the aggregate level, world population growth has slowed compared with ten years ago and stands at an annual growth rate of 1.1%. However, such figures mask highly heterogeneous demographic patterns between regions and urban and rural territories.

While more than half the growth forecast between 2019 and 2050 (estimated at two billion people) is expected to take place in Africa, Asia is expected to grow by 650 million people, Latin America by 180 million whilst Europe’s population is expected to decrease. Population growth will be concentrated in the least economically developed regions, which will make it even harder for those territories and cities to eradicate poverty and hunger and improve the provision of education, health and basic services. Moreover, the number of persons aged over 60 is expected to rise to 1.4 billion by 2030, although the pace at which the population is aging varies greatly between world regions. By 2050, all regions of the world are expected to have more than 25% of their populations aged over 60 — with the exception of Africa, which is expected to concentrate the world’s largest share of population aged between 15 and 19. Aging territories and cities will face increasing fiscal and political pressure to provide the elderly with pensions and social protection. At the same time, it will be critical for territories and cities with swelling youth populations to provide adequate healthcare, education and job opportunities to ensure the implementation of the 2030 Agenda.

Climate and environmental challenges are profoundly reshaping our territories and have a direct impact on cities. According to the Intergovernmental Panel on Climate Change (IPCC) 2018 Special Report, the world has already warmed by 1°C above pre-industrial levels and, at the current rate of warming of 0.2°C per decade, global warming will reach 1.5°C by 2030. This report stresses the pivotal role played by cities in climate change mitigation and in reaching the agreed goal of limiting climate change to 2°C, and if possible 1.5°C. Allowing global warming to reach 2°C will critically endanger natural and human systems and will particularly affect the most vulnerable populations and territories. Since 1990, climate-related extreme disasters have more than doubled. This, together with drastically changing weather conditions, is causing unquantifiable suffering and loss of human life and the destruction of infrastructure, aggravating resource scarcity and forcing the displacement of populations. Existing tensions act as risk multipliers for violence, putting additional pressure on often fragile political systems and resources. Since 2010, state-based and non-state-based conflicts have risen by 60% and 125% respectively, while the number of globally displaced people has doubled over the past 20 years to reach 65 million. The deterioration of global peace constitutes a fundamental threat to the rule of law and good governance and, consequently, to the cornerstones of sustainable development.

In the face of such challenges, it is imperative that we scale up and accelerate action before it is too late. In order to do so, we need to think differently about development strategies and adopt an evidence-based approach to sustainable development that reflects the reality of today’s world. Urbanization, the development of frontier technologies and connectivity are some of the defining features of our contemporary societies, and although they pose challenges to governance, they are also the key to achieving the SDGs and preserving life for future generations.

The purpose of the GOLD V Report is to propose how these ambitious Global Goals and objectives can be met through policies, actions and initiatives designed and put in place by the territories and communities that make up cities, towns and regions. The report suggests that this cannot be done unless urban and territorial planning, strategic design, institutional environments and political roadmaps are fully embedded in the territories, i.e. ‘territorialized’, taking full advantage of local potentialities, involving all local stakeholders and building on local needs and demands. In other words, these goals can only be achieved through a fully-fledged, co-owned and accountable process of localization of the global agendas (see Box 3).

Territories and cities can lead transformational processes that promote development models that are both respectful of the environment and put people first. Territorialized development strategies based on integrated planning have the power to transform cities and territories, foster inclusion, reduce resource usage and GHG emissions, and improve rural-urban linkages. When coupled with cutting-edge technologies, the economies of scale facilitated by cities and their ability to attract innovation become major catalysts for the achievement of the SDGs, allowing for the development of alternative patterns of production and consumption, decentralized renewable energy systems, individualized healthcare, natural disaster detection solutions, and stronger bonds between cities, towns and their hinterlands. The possibilities are endless.

As shown throughout the GOLD V Report, such localized development strategies, developed from and suited to local realities, also have an impact on the global process of transforming local processes. The transformational potential of a territorial approach to local development (TALD) is enormous (see Box 4). Yet, in order to fully unleash it and ensure the implementation of the global development agendas, important challenges must be tackled. Significant efforts have been made since 2015 to implement the 2030 Agenda’s provisions and advance towards the achievement of the Goals. However, given the multi-dimensional challenges our societies are facing, the 2030 Agenda and the SDGs call for a move beyond narrow targeted policy-making towards a review of governance culture and governance.

Box 3

Localization

The 2030 Agenda emphasizes the need for an inclusive and localized approach to the SDGs. Localization is described as ‘the process of defining, implementing and monitoring strategies at the local level for achieving global, national, and sub-national sustainable development goals and targets.’ More specifically, it takes into account sub-national contexts for the achievement of the 2030 Agenda, from the setting of goals and targets to determining the means of implementation and using indicators to measure and monitor progress.

institutions. As discussed in the GOLD V Report, existing national strategies and institutional frameworks for SDG implementation, as well as the state of decentralization and the means available for local implementation of the global agendas, determine the transformational strength that local action can achieve (see Box 5). Questions thus arise: can the SDGs both inspire local action and influence such institutional environments? and can local action arising from the cities and territories translate into global change?

**Box 4**

**Territorial approach to local development (TALD)**

National development policy that recognizes local development as being endogenous, incremental, spatially integrated and multi-scalar, and which acknowledges the primary responsibility of local authorities for planning, managing and financing such local development — in other words, development that enables autonomous and accountable local authorities to leverage the contribution of actors operating at multiple scales to produce public goods and services tailored to the local reality, which in turn brings incremental value to national development efforts.

*Source: European Commission DEVCO (2016), ‘Supporting decentralization, local governance and local development through a territorial approach’.*

**Box 5**

**Decentralization**

The existence of local authorities, as distinct from the state’s administrative authorities, to whom the legal framework allocates powers, resources and capacities to exercise a degree of self-government in order to meet the allocated responsibilities. Their decision-making legitimacy is underpinned by representative, elected local democratic structures that determine how power is exercised and make local authorities accountable to citizens in their jurisdiction.

The World Observatory on Subnational Government Finance and Investment proposes the following definition: ‘decentralization consists of the transfer of powers, responsibilities and resources from central government to sub-national governments, defined as separated legal entities elected by universal suffrage and having some degree of autonomy’.

This is important for shedding light on a number of related issues affecting (and changing) development policy globally. As stated previously, this study primarily aims to show the state of progress of SDG achievement in the territories and emphasize its critical importance for the realization of the global agendas. On the one hand, it is widely acknowledged that fulfilment of the 2030 Agenda requires the full engagement and commitment of all levels of governance including LRGs, civil society and local stakeholders such as the private sector, social partners, academia and grassroots organizations. On the other, territories and local communities are where implementation is taking place. The key question addressed by the GOLD V Report is the extent to which towns, cities, provinces and regions have been able — through their actions and initiatives — to become part of the solution to the fundamental and historic challenges they face. Analyzing the progress that local governments are making in the implementation of the Goals and their ‘localization’ — bringing them down to the local level, rethinking and re-designing them so that they fit with the characteristics and demands of citizens and territories — is an indication of how well the SDG framework itself is developing, and how much there is still left to do.

The GOLD V Report also aims to provide an updated picture on the current state of decentralization around the world. Achieving the SDGs and the other global agendas at the local level will not be possible unless territories, communities, and local authorities at different sub-national levels are adequately empowered, supported and funded. This implies strengthening and improving decentralization of the political system, promoting the devolution of competences and powers, ensuring respect for the principle of subsidiarity and making local governments responsible and accountable (see Box 6).

This regional report includes an analysis of national strategies for the implementation of the 2030 Agenda and how LRGs are being engaged in this process, whether the institutional framework enables LRGs to be proactive in the implementation of these agendas, and the status of decentralization in the region. The report aims to answer questions on decentralization trends and the development of a truly multilevel understanding of policy-making: are LRGs more empowered and active than they used to be? have the SDGs and the other global agendas driven any change in institutional relationships and vertical/horizontal cooperation? are national planning and decision-making mechanisms and systems more open, sensitive to and aware of LRGs and their unique potential within territories and communities to effect change?
Looking at decentralization and providing up-to-date mapping of how this trend has evolved are all the more essential in studying territorial and municipal authorities, given that rapid (and often uncontrolled) urbanization has become a worldwide phenomenon and a fundamental challenge facing local governance. Urbanization has had a crucial impact on several dimensions of local and regional governance: from urban and territorial planning, to the provision of basic public services; from socio-economic equality to marginalization and informality in housing and work; from the inevitable impact of climate change to the creation of new social and cross-cutting alliances to improve democracy, transparency and the quality of life in cities and territories. However, advances in these fields raise fundamental questions of sustainability and viability. The global agendas were agreed with the expectation that LRGs would act as accelerators and catalysts in the process, but how is this pressure altering the political balance? What room is there for LRGs to see their competences, powers, capacities, financial and human resources grow and improve, making them more aware, responsible and able to play an active role in the global quest for sustainability, prosperity and inclusiveness? What kind of financial autonomy is really granted to local and regional governments? There are plenty of financial and management instruments (climate and green bonds, Public-Private-People Partnerships — PPPPs — and remunicipalisations, amongst many others) that are changing the way actors are empowered at all levels to become drivers of change and leaders in policy-making. In what way are these new opportunities accessible to local governments? And how can those that are more visionary and long-sighted fund and sustain their policies and agendas in the long term?

The ability of LRGs to report on their policies and actions is also problematic since it is currently limited by a substantial lack of data, indicators and measurement which historically has not been devolved or disaggregated enough (with the partial exception of larger and wealthier regions and cities), hindering the capacity to grasp the huge potential at the local level for the localization and achievement of the Goals.

Ultimately, the responsibilities that LRGs are assuming in the localization of the SDGs and other agendas are raising fundamental questions of local democracy, accountability and transparency, representation and the place occupied by the local level in the current global system. Can LRGs be catalysts for change in politics and development policy? Do LRGs have the means and capacities to ensure that ‘no person or place is left behind’? Can effective intergovernmental cooperation across all levels of governance improve performance, boost policy coherence (see Box 7) and help make the SDGs and the global agendas a reality, with positive effects on the quality of life of territories, cities, communities and society? Can the SDGs trigger a new model of development — urban, territorial, social, economic and human — which starts at the local level? This regional report provides inputs, answers and critiques of these points, as well as exploring other relevant issues. The conclusions and policy recommendations provide a common vision and understanding of the way forward for LRGs.

**Box 6**

**Subsidiarity**

The principle according to which public responsibilities should be exercised by those elected authorities closest to citizens. The central authority should have a subsidiary function, performing only those responsibilities or tasks which cannot be performed at a more local level. Subsidiarity requires that local governments have adequate financial, managerial and technical and professional resources to enable them to assume their responsibilities to meet local needs, carrying out a significant share of public expenditure. Local governments should be granted the authority and power to raise local resources in line with the principle that authority be commensurate with responsibility as well as the availability of resources. The principle of subsidiarity constitutes the rationale underlying the process of decentralization.

**Box 7**

**Policy coherence**

An approach to sustainable development that calls for the integration of economic, social, environmental and governance dimensions in the policy-making process, acknowledging the critical interlinkages that exist between the SDGs. It aims to foster synergies, promote partnerships and balance transboundary and intergenerational policy impacts in order to identify and manage the relationships between SDGs in a way that limits and overcomes any potential negative impact resulting from their implementation.

The SDGs and the 2030 Agenda have been widely embraced in the Asia-Pacific (ASPAC) region. Most governments are working towards including them in several development policies and planning and monitoring frameworks at the national and sub-national levels. There are, however, still significant challenges facing the implementation of the SDGs in the region, including trying to advance localization through enhanced territorial development strategies. The region’s vast population and geographic area, rapid levels of urbanization and environmental threats all affect the localization of the SDGs.¹

The ASPAC region, as defined by UCLG, is divided into four sub-regions, namely: Southern and South-western Asia, South-eastern Asia, Eastern and North-eastern Asia and Pacific Island countries. The region encompasses a wide range of sub-regions, countries, special administrative regions and some of the world’s wealthiest and poorest countries, as well as the largest and most isolated countries and cities on Earth. It is home to more than 54% of the world’s population (4.1 billion inhabitants), of which around 50% live in urban areas.² And it is one in the most diverse and fastest growing regions in the world, accounting for more than 60% of the world’s economic growth and development.

Urbanization has helped millions escape poverty through increased productivity and employment opportunities, improved quality of life, and large-scale investments in infrastructure and services.³ Most of the 2.26 billion ASPAC urban dwellers live in relatively densely populated urban environments, with the urban population predicted to reach 3 billion by 2035. The region has more than 4,400 urban centres with populations of over 50,000 people. Around

At the same time, small and medium-sized cities are growing rapidly, creating long urban corridors and clusters in many countries. Sixty-five percent of the urban population in the ASPAC region lives in medium-sized cities.⁴

Urbanization is one of the megatrends facing the region in the coming decade. Although coupled with rapid economic growth, urbanization entails significant environmental and social costs.⁵ Asia is home to more than half of the world’s cities most vulnerable to a range of natural disasters, including rising sea levels resulting from climate change.⁶ Even though the proportion of the urban population living in slums has decreased, the number of people living in slums is increasing. Disaster risk, slums, air pollution, congestion, informality, and access to (and quality of) basic services are among the challenges facing many Asian cities.

The United Nations Economic and Social Commission for Asia and the Pacific’s (UNESCAP) 2019 assessment of progress in SDG implementation underlines the significant improvement made in the region, particularly with respect to poverty reduction, education and life expectancy. However, the report also stresses that ‘on its current trajectory, Asia and the Pacific will not achieve any of the 17 SDGs by 2030’.⁷ Measures are underway to achieve affordable and clean energy (SDG 7). Yet inequalities are widening and many sub-regions are lagging behind. Several areas show little progress in food security (SDG 2), supporting industry, innovation and infrastructure (SDG 9), reducing inequalities (SDG 10), building sustainable cities and communities (SDG 11),

Large disparities between countries threaten ASPAC’s overall ability to achieve the SDGs. According to SDG performance indexes, South Asian countries’ scores are below the global median (with the exception of Bhutan), while South-eastern Asian countries are distributed around the median (with the exception of Myanmar, with much lower scores) and East Asian countries, namely Australia and New Zealand, score over the median. Mass investments are needed to achieve the SDGs in the ASPAC region (estimated at USD 1.5 trillion annually).

This Report presents an overview of the progress made towards the implementation of the 2030 Agenda in ASPAC countries, with a focus on the role of local and regional governments (LRGs). The challenges of localization of the SDGs in the region have been partially documented in several reports. The publication is divided into four sections. Following the introduction, Section 2 discusses the SDG implementation strategies adopted by countries in the region and the enabling institutional environments for sub-national government action; Section 3 describes activities currently being undertaken at the local level to develop a territorial approach to the implementation of the SDGs, showcasing local practices that address some key development challenges faced by cities and territories in the region. The conclusion synthesizes findings and outlines an action agenda to accelerate the localization of the SDGs in the region through a territorial development approach.
02. National and local institutional frameworks for the implementation of the SDGs
2.1 National strategies and institutional arrangements for the implementation of the SDGs

All countries in the ASPAC region have signed up to the SDGs. The preparatory phase to support the implementation of the SDGs involves a range of activities, from integrating the SDGs in national development strategies (alignment of national development plans (NDPs) or strategies to the SDGs) to the development of institutional frameworks (for example, the appointment of national coordinating committees) and the establishment of monitoring and reporting mechanisms.

Twenty-eight countries have presented Voluntary National Reports (VNRs) between 2016 and 2019. Nine countries have committed to present their VNRs in 2020. The majority of the VNRs reflect the progress that countries are making in the preparatory and implementation phases.

SDG national strategies and plans

As summarized in Table 1, countries in the ASPAC region have taken significant steps towards mainstreaming the SDGs into their national planning processes, and governments have designated national, focal or nodal agencies to coordinate the implementation of the goals. The UNESCAP synthesis report on the 2019 VNRs highlights that a majority of countries have revised or realigned their NDPs to support the mainstreaming of the goals. The UNESCAP synthesis report on the 2019 VNRs highlights that a majority of countries have revised or realigned their NDPs to support the mainstreaming of the goals. The UNESCAP synthesis report on the 2019 VNRs highlights that a majority of countries have revised or realigned their NDPs to support the mainstreaming of the goals.

As shown in Table 1, a majority of countries use their national development strategies as a framework for the implementation of the 2030 Agenda, thus ensuring the integration of the SDGs in their development plans. Some countries have integrated the SDGs into sectoral plans, for instance the South Korean 3rd National Basic Plan for Sustainable Development, which selected the goals and targets that were considered most relevant based on national priorities. Other countries mapped sectoral plans and policies and assigned responsibilities to the different ministries and agencies to cover all the SDGs. China, for example, aligned the SDGs with its Five Year Plan. Japan launched a sustainable development vision and plan soon after adopting its commitment to the SDGs and the 2030 Agenda. Indonesia mapped its mid-term plans against the SDGs. Countries such as Australia and New Zealand are still working on defining their strategy, but have integrated the SDGs in different areas. The Small Pacific Island States face unique difficulties in developing plans and are more reliant on international support.

The UNESCAP synthesis report on the 2019 VNRs highlights that a majority of countries have revised or realigned their National Development Plans to support the mainstreaming of the 2030 Agenda.

In regional forums organized by UNESCAP, countries stressed the importance of integrating policy responses effectively, improving inter-ministerial coordination and establishing adequate monitoring systems, which are particularly affected by a lack of resources and primary statistical data at all levels to measure performance.

With respect to the implementation of the SDGs from the perspective of sub-national governments (SNGs), the localization of strategies to realize the SDGs and the role played by local governments is mentioned in a number of VNRs (Bhutan, China, Japan, South Korea, Nepal, Pakistan, the Philippines, Sri Lanka, Timor-Leste and Viet Nam; in India mainly at state level), while a few others make specific references to territorialization strategies (Indonesia). Many

<tbody>
<tr>
<td>Bangladesh</td>
<td>The 2030 Agenda has been integrated into Bangladesh’s Seventh Five Year Plan (2016-2020) and an action plan has been prepared. Coordination: SDGs Inter-Ministerial Implementation and Monitoring Committee established by the PM. No LRG participation reported.</td>
</tr>
<tr>
<td>Bhutan</td>
<td>The 12th Five Year Plan (2018-2023) has been aligned with the SDGs. The process was initiated in the 11th Plan. The plan focuses development on National Key Result Areas (NKAs). Coordination: Bhutan’s Gross National Happiness (GNHC) Commission (inter-agency coordination body), including a High-Level SDG Working Committee (in charge of preparation of the VNR) with parliamentary oversight.</td>
</tr>
<tr>
<td>Cambodia</td>
<td>The Cambodian Sustainable Development Framework, approved in November 2018, will be integrated into the National Strategic Development Plan. Coordination: National Council on Sustainable Development which is coordinated by the Planning Ministry in charge of SDG implementation. LRGs consulted.</td>
</tr>
<tr>
<td>China</td>
<td>China’s 13th Five Year Plan (2016-2020) for Economic and Social Development adopted in March 2016 reflects the SDGs. In September 2016, the country also released China’s National Plan on the Implementation of the 2030 Agenda for Sustainable Development, which translates each target of the SDGs into action plans for the country. Several sectoral plans are also aligned with SDGs. Coordination: inter-agency coordination mechanism (43 government departments) led by the Ministry of Foreign Affairs. No direct participation of LRGs.</td>
</tr>
<tr>
<td>India</td>
<td>SDGs are integrated in the Three Year Action Agenda 2017-20, as well as in the 15-year vision and 7-year strategy. Coordination: National Institution for the Transformation of India (NITI Aayog), chaired by the Prime Minister. The Ministry of Statistics and Programme Implementation formulates indicators. Only states’ chief ministers are represented in coordination mechanisms.</td>
</tr>
<tr>
<td>Indonesia</td>
<td>SDGs are incorporated in the national development vision (Nawacita) and at all three levels of Indonesia’s development planning: National Long-Term Development Plan 2005-2025, the National Medium-Term Development Plan 2015-2019 and in the 1-year Government Work Plan. An SDGs Action Plan (2017-2019) was launched in June 2018. In addition, Indonesia is formulating a 2030 Agenda Roadmap and integrating the SDGs in the preparation of the Medium-Term Regional Development Plan 2020-2024 and Regional Work Plan at the sub-national level. Coordination: SDGs National Coordination Team, headed by the President. There is also an implementation team, which is coordinated by the Ministry of National Development Planning (BAPPENAS), an expert panel and four multi-stakeholder forums for follow-up. SDG coordination teams have also been created at the sub-national level.</td>
</tr>
<tr>
<td>Malaysia</td>
<td>SDGs have been integrated into the Eleventh Malaysia Plan 2016–2020 and Vision 2020. Coordination: National SDG Council (chaired by the Prime Minister) and a National Steering Committee (chaired by the Director of Economic Planning Unit), which includes five Cluster Working Committees (with ministries, CSOs, the private sector, academia, UN agencies and youth). Similar mechanisms were created at the state level.</td>
</tr>

</table>

**Lao People’s Democratic Republic**

The Third National Basic Plan for Sustainable Development 2016–2020 provides a basic platform for implementing the 2030 Agenda. Coordination: Commission on Sustainable Development (led by Ministry of Environment). It includes civil society organizations (CSOs) and academia, the Office for Government Policy Coordination and the Committee for International Development Cooperation (CIDC) for international policies (led by the Ministry of Foreign Affairs). No direct participation of LRGs reported.

**Republic of Korea**

A set of SDG Promotion Guiding Principles were adopted in 2016. The SDGs have been integrated into the 8th National Socio-Economic Development Plan (2016-2020) and in its monitoring and evaluation framework; into the Ten Year Socio-economic Development Strategy (2016-2025) and into the Development Vision toward 2030. Lao PDR is developing a roadmap for implementing the SDGs. Coordination: National SDG Steering Committee, chaired by the Prime Minister and led by the Ministries of Foreign Affairs, Planning and Investment and the Lao PDR Statistics Bureau. No participation of LRGs reported.

**Japan**

The 2018 Basic Policies and 2018 Economic Growth Strategy are committed to promoting the SDGs. In December 2017, Japan adopted the 2018 SDG Action Plan and in June 2018, the Expanded SDG Action Plan. Coordination: SDGs Promotion Headquarter, headed by the Prime Minister (inter-ministerial structure). LRGs involved in SDG Promotion Roundtables (consultative level).
Maldives
Alignment of SDGs is underway. Coordination: National Ministerial Coordination Committee (inter-ministerial mechanism) chaired by the Prime Minister and coordinated by the Ministry of Environment and Energy; there is also a technical committee (multi-stakeholder). Local governments aligned their five-year development plans (2017-2021) with the SDGs.

Myanmar
The National Comprehensive Development Plan (NCDP) 2011-2031 and the 2nd Five Year Plan 2016-2021 have been revised to include the SDGs and Myanmar Sustainable Development Plan (draft version, February 2018), Readiness Report of Myanmar’s Official Statistics for SDGs and SDGs Baseline Indicators Report. Coordination: Ministry of Planning and Finance.

Nepal
Nepal integrated the SDGs into its 14th Periodic Plan (2016-2017-2018/2019) and into sectoral strategies and annual programmes. The SDGs Status and Roadmap 2016-2030 serves as a framework. Coordination: SDG Steering Committee chaired by the Prime Minister. There is also a National Planning Commission and an SDGs Coordination and Implementation Committee (chaired by the Vice-chairman of the National Planning Commission). CSOs, private sector and development partners participate in nine SDG Implementation and Monitoring Thematic Committees. Local authorities recently elected.

Pakistan
SDGs are embedded in the Pakistan Long-Term Development Agenda, in the 12th Five-Year Plan (2018-2023) and provincial medium-term development strategies and public sector development programmes. A national SDG Framework towards 2030 was adopted in 2018, while the provinces are in the process of developing provincial SDG frameworks. Coordination: National Economic Council, chaired by the Prime Minister and Ministry of Planning, Development and Reforms. The four provinces have established SDG Support Units in their planning and development departments (plus two extra units in federally administered areas), as well as technical committees and thematic clusters. Focal persons have been nominated down to district level. Taskforces in the national and provincial parliaments have been established to review progress and facilitate legislative support for implementation. A National Advisory Committee on SDGs has been announced.

Philippines
The SDGs are integrated into the Philippine Development Plan 2017-2022, complemented by national budget allocations through the Public Investment Programme, which are geared towards the achievement of the country’s long-term document ‘Ambisyon Natin 2040’ and 10-Point Socio-economic Agenda. Coordination: the creation of a sub-committee on the SDGs has been approved by the Development Budget Coordination Committee (DBCC). The sub-committee will be co-chaired by the Department of Budget and Management (DBM) and the National Economic and Development Authority (NEDA).

Singapore
Singapore adopted a whole-of-government approach to develop and implement integrated and sustainable policies as part of its Sustainable Singapore Blueprint 2015. Coordination: Inter Ministerial Committee on Sustainable Development, co-chaired by the Ministry of Foreign Affairs and the Ministry of Environment and Water Resources.

Sri Lanka
The Vision 2025, the Public Investment Programme (2017-2020) and the ‘Blue Green’ budget of 2018 are the foundations of the strategic development framework. A National SDG Action Plan (2017-2020) was developed in 2016 but not implemented. Coordination: Sustainable Development Council (SDC) during the first years under the purview of the Presidency and Ministry of Sustainable Development and Wildlife Conservation (Act 19, October 2017), although recently the ministry has been dissolved. The SDC should comprise 12 members, three of whom are from provincial councils (appointed by the President), but LRGs are not involved.

Thailand
The SDGs are integrated within the 20 Year National Strategy Framework (2017 - 2036) and the 12th National Economic and Social Development Plan (2017 - 2021). Coordination: National Committee for Sustainable Development (CSD), chaired by the Prime Minister (multi-stakeholder, with three taskforces and a secretariat assured by the National Economic and Social Development Board).

**Timor-Leste**

National Strategic Development Plan 2011-2030 and Roadmap for the implementation of the 2030 Agenda adopted in 2017. Coordination: SDG Working Group (government ministries, parliament, academia, private sector, media, religious organizations, and representatives of civil society, with the United Nations as observer). There is a VNR Secretariat (including a Planning and Monitoring and Evaluation Unit-UPMA) and a CSO advisory group. The creation of a National Commission for the SDGs has been proposed.

**Viet Nam**

SDGs have been integrated into the Five Year National Development Plan (2016-2020). The seventeen global SDGs have been nationalized into 115 Viet Nam SDG (VSDG) targets in the ‘National Action Plan for Implementation of Agenda 2030 for Sustainable Development’ (NAP). The NAP will be implemented in two phases: 2017-2020 and 2021-2030. Coordination: Ministry of Planning and Investment in charge of SDG implementation; Inter-sectoral Working Group on SDGs; and the National Council on Sustainable Development and the Competitive Enhancement which provides strategic advice.

**New Zealand**

A Living Standards Framework was developed by the New Zealand Treasury, while Statistics New Zealand developed Indicators Aotearoa New Zealand (Ngā Tūhohu Aotearoa). The country has also adopted an Urban Growth Agenda. Coordination: SDG national summits ensure the involvement of all sectors, including LRGs, in building a multi-sector action plan for SDG implementation, which is currently underway. The 2nd SDG Summit was held in September 2019, in order to ‘accelerate action, together’.

**Kiribati**

SDGs are aligned with the Kiribati Development Plan (KDP) 2016-2019 and Kitinsyi Vision 20. Coordination: Development Coordinating Committee and SDG Taskforce, which operate under the oversight of the National Economic Planning Office of the Ministry of Finance and Economic Development. The Kiribati Local Government Association has contributed to the VNR.

**Samoa**

The Strategy for the Development of Samoa 2016/17-2019/20 is aligned with the SDGs, as well as with the Small Island Developing States Accelerated Modalities of Action (SAMOA). Coordination: National SDG Task Force (inter-ministerial), chaired by Ministry of Foreign Affairs and Trade. No reference to LRGs.

**Tonga**

Tonga Strategic Development Framework 2015-2025. Coordination: The Planning Division in the Office of the Prime Minister coordinates the implementation of the SDGs in Tonga, supported by the Tonga Sustainable Development Taskforce (a multi-stakeholder body) and a Technical Working Group (which supports the Taskforce).

**Vanuatu**

Vanuatu 2030. The People’s Plan, Annual Development Report, and Final Technical Report on the National SD Plan 2016-2030 (also aligned with the Pacific Roadmap for SD); Coordination: Department of Strategic Policy, Planning and Aid Coordination within the Office of Prime Minister.

---

**Australia**

Australia has not developed a process to integrate the SDGs into national and sub-national policy yet. Coordination: Inter-departmental Committee, co-chaired by the Department of the Prime Minister and Cabinet and the Department of Foreign Affairs and Trade. The Council of Australian Government acts as the coordinating forum for the states and territories.

**Papua New Guinea**

---

countries have made efforts to raise awareness among local governments through campaigns, national symposiums, conferences, seminars and forums. However, such outreach efforts are often sporadic and the involvement of LRGs is still limited, as outlined in a number of reports and studies.20

Indeed, both a review of the VNRs and local governments’ testimonies show that the participation of LRGs in the preparation of these reports remains limited. Local governments participated in the consultation process (mostly through multi-stakeholder workshops or occasional consultations) in only 11 out of the 28 countries that have presented their VNRs.21

Although responsibility for the implementation of the SDGs in the 2030 Agenda lies with central governments, LRGs should be involved to a greater extent in the preparation of VNRs and subsequent review documents.

**Institutional arrangements**

The scope and ambition of the 2030 Agenda for Sustainable Development requires cross-sectoral action from all parts of government, as well as from non-governmental stakeholders. Following the adoption of the 2030 Agenda, member countries have put in place different mechanisms to ensure coordination and follow up of the commitments. Many have used pre-existing national mechanisms (e.g. Bhutan, Cambodia, India, South Korea, Papua New Guinea, Singapore, Thailand, Vanuatu and Viet Nam). Others have created new processes and designated national focal or nodal agencies in charge of the implementation of the 2030 Agenda, mostly at high levels of government — prime ministerial or inter-ministerial level — to ensure governmental commitment (e.g. Australia, Bangladesh, China, Indonesia, Japan, Kiribati, Lao PDR, Maldives, Malaysia, Nepal, Pakistan, the Philippines, Samoa, and Sri Lanka). In some cases, the mechanisms involve other non-governmental stakeholders such as the private sector, NGOs, religious groups and academia (e.g. Indonesia, South Korea, Malaysia, Maldives, Nepal, Palau, Samoa, Timor-Leste and Thailand).

The involvement of LRGs in coordination and follow-up mechanisms is still limited: only in six countries have LRGs been involved or consulted in some way through national mechanisms (e.g. South Korea, Malaysia and Thailand). Some countries have not defined coordination mechanisms yet (e.g. New Zealand). The Asian Sustainable Development Forum has also emphasized the importance of adopting a ‘whole-of-government approach’ and the importance of conducting full and comprehensive consultations that involve a wide range of stakeholders, including CSOs, NGOs, think-tanks, businesses, local governments, philanthropic organizations and the media.23

The involvement of LRGs in coordination and follow-up mechanisms is still limited: only in six countries have LRGs been involved or consulted in some way through national mechanisms.
2.2 Enabling institutional environments of local and regional governments

Overview of regional trends

Since the 1990s, decentralization and state reforms have taken place in most ASPAC countries, yet the pattern of decentralization differs greatly from country to country. As is often the case, in federal countries such as Australia, India, Pakistan and, to a lesser extent, Malaysia, the federated units (states or provinces) have legislative jurisdiction to determine the institutional arrangements for their local government systems, assign functions and responsibilities, and regulate the fiscal framework for local governments. Local government is generally a state or province matter. In unitary countries, the determination of local governments’ institutional environment and their oversight are the responsibility of central government, while the scope of local government is defined in the countries’ constitutions and complementary legislation. Some constitutions, such as those in Bhutan, South Korea, Malaysia, the Philippines and Thailand, make clear provisions for local governments.

Constitutional and legal reforms have continued over the last decade and have entailed territorial and political reorganizations. Bhutan and Myanmar in 2008, Pakistan in 2010 (the 18th Constitutional Amendment makes it compulsory for provinces to establish local government systems), Fiji and Viet Nam in 2013, Nepal in 2015 (which entailed the federalization of the country), and Thailand in 2017 have all adopted new constitutions. In the Philippines, a constitutional draft was presented to the President in July 2018 entailing the creation of 18 federal regions. Similarly, constitutional reform is being proposed in South Korea to embed decentralization in the constitution. Over the past years, other laws have reformed local government frameworks in the majority of countries in the region.

In 2018, UCLG ASPAC and Cities Alliance proposed an evaluation of how enabling the institutional environments were for local governments, in terms of supporting sustainable development in the regions (Cities Enabling Environment or CEE assessment). The assessment offers a review of local governance in the region. According to the assessment (based on 11 criteria to reflect the different dimensions of an ‘enabling environment’ for LRGs), the most economically developed countries in the region (Australia, Japan, New Zealand and South Korea), as well as Bhutan, Indonesia and the Philippines, have the most enabling environments for local government action (see Figure 1).

Within this group, the assessment finds that LRGs in Japan and New Zealand benefit from the most favourable enabling environment with respect to local autonomy and accountability. This is followed by Australia and South Korea, with lower scores in terms of constitutional arrangements and fiscal decentralization respectively. A special Act on Autonomy and Decentralisation and Local Administration System was promulgated in South Korea in March 2018.

Bhutan scores highly in terms of sustainable development, but less so on local democracy (assemblies are elected but executive bodies are appointed).

Despite being a highly centralized political regime, China also ranks highly. SNs benefit from a relatively large degree of autonomy in terms of implementing local development policies, and local assemblies and executive bodies are elected (although not necessarily across the whole country and higher levels of government often influence elections). Indonesia’s score is low on urban policies and sustainable development policies, while the Philippines has a low score on fiscal decentralization. It should also be noted that legal frameworks are not always fully implemented in the Philippines.

A second group of countries with intermediate rankings includes Thailand, Viet Nam, India and some Pacific Islands such as Vanuatu. The majority of these countries have low scores on fiscal decentralization. Within the framework of the 2015 Law on Organization of Local Administration adopted in 2015, Viet Nam’s local governments are considered part of the national government’s administrative body and organized according to a centralized structure; local assemblies are
elected but executive bodies are appointed, while local budgets are a part of the state’s budget and must be approved by the National Assembly. In Thailand, decentralization has slowed significantly because of instability in the political system in the country; the Ministry of Interior can intervene in or modify local policies. In India, decentralization is uneven, despite the 73rd and 74th constitutional amendments of 1992 that granted recognition and protection to local governments. Some states have made progress with respect to decentralization, but in a majority of states local governments have very limited powers and resources.29

A third group includes countries where local government reforms are still at an early stage or where local administration is effectively deconcentrated rather than decentralized. This group includes Cambodia, Lao PDR, Malaysia and Myanmar. All have low scores in terms of local democracy and fiscal decentralization. In Cambodia and Lao PDR, local assemblies are elected but executive bodies are appointed. In Malaysia, state governors are elected, but both local assemblies and executive bodies of local governments are appointed. Tasks that were traditionally devolved to local governments have been partially recentralized or privatized. In Myanmar, following the 2008 Constitution, local administrations’ oversight became the responsibility of the newly created states and regional governments. Therefore, in spite of the institutional changes, the local administration system remains highly centralized.30 Following the recent constitutional and legislative reforms (including the Local Governance Operation Act and Inter-Governmental Fiscal Management Act 2017), Nepal could also be included in this group; new local authorities were elected in May-June 2017, yet the overall capacity of local governments remains weak.

A final group includes those countries with the lowest scores, namely Bangladesh,31 Pakistan,32 and Timor-Leste.33 In these countries, decentralization reforms have either stagnated or regressed altogether. Sri Lanka was initially put in this group, but local elections were finally held in the country as recently as February 2018 for all its 340 local governments (24 municipal councils, 41 urban councils and 275 divisional councils). It was the largest election in Sri Lankan history.34 In the Pacific Region, the Maldives, Fiji, Kiribati and the Solomon Islands also form part of this group, since local governments are remarkably weak here in terms of political and fiscal autonomy.35 In some cases, central governments have not delegated effective functional authority to local administrations. Consequently, greater reform is needed in these two last groups of countries in terms of defining the role of local authorities, increasing local powers and fiscal decentralization and setting up frameworks for performance assessment. Other Pacific Small Island Developing States (with the exception of Fiji and Palau) have their own specific features or do not have local self-government systems at all.36

In many nations, despite efforts to clarify the allocation of responsibilities, there is significant overlap between different levels of government — states, regions and local governments — and some legal provisions have not been implemented. In many cases, central line agencies exert direct control over local governments or manage similar responsibilities, undermining their autonomy in spite of legislative provisions.

The strengthening of local democracy is a key area identified for regional reform by the CEE assessment, although some progress has been observed. In 2017, Nepal held the first local elections in almost two decades and in Bangladesh, district councils were elected in 2016 for the first time, although this did not apply to the whole country. As mentioned above, Sri Lanka’s 2018 local elections finalized a process that had been suspended since 2015. In Pakistan, following the 2010 18th Constitutional Amendment, all provinces passed local government regulations and were able to hold local elections in 2015.

and 2016. However, in January and May 2019 respectively, local governments in the provinces of Balochistan and Punjab were dissolved. In the latter, a new law, the ‘Punjab Village Panchayats and Neighbourhood Councils Act’ of 2019, mandates the provincial government to hold elections within a year. Malaysia has elections at state level, but local elections have been suspended since 1965. Local elections in Thailand, suspended since the military coup in 2014, were scheduled to be held 90 days after the national elections in March 2019, although they have not yet taken place (as of April 2020). In Myanmar, the first local elections took place in the country’s main cities (Yangon and Mandalay) in 2019.37 In Fiji, local authorities have been appointed since the military coup in 2006. In other Pacific Small Island Developing States, government structures operate in parallel with customary chiefdoms and there is a high level of consultation amongst the community.

Unfortunately, women’s representation is still limited in the region (on average only 19% of seats in national parliaments and local governments are occupied by women).38 Nepal’s new constitution mandates a 40% quota of elected women representatives at the municipal level. As a result, 95% of the 293 municipalities now have women councillors and deputy mayors. Other countries...
have also established quotas for women (e.g. India, Indonesia and Sri Lanka). However in Indonesia, despite the 30% quota applied to the parliament’s composition, women legislators represented 16% in the total at provincial level and 14% at municipal level (16.6% at national level). In the Philippines, the proportion of women in local government was 31% in 2016, but this fell to 21.3% in 2018.

### Changes in the territorial organization of countries in the region

There are approximately 437,000 SNG entities in the ASPAC region, with up to four distinctive levels of local government ranging from large cities with populations of over five million to small semi-autonomous self-governing neighbourhoods or villages with a few thousand inhabitants. In addition to LRGs, there are quasi-governmental and authority districts which operate across local government boundaries, such as metropolitan development authorities, capital districts, planning or utility agencies, and educational local authorities (Japan). In many cases the areas under their jurisdiction do not correspond to local governments’ administrative boundaries, which poses coordination difficulties when it comes to the planning and management of cities and urban areas.

*These statistics exclusively cover mainland China and exclude the two special administrative regions of Hong Kong and Macao.

**The fourth level consists of townships/villages (39,862). Although these are not acknowledged in the constitution, they are recognized by the Budget Law and the fiscal system.

Source: World Observatory of Sub-national Government Finance and Investments, CLGF and other sources.

(1) China, Lao PDR and Viet Nam are considered to be a ‘one party system’.
It is difficult to identify a common trend with respect to the evolution of territorial organization in the region. Japan, for example, reduced the number of SNGs between 1999 and 2016 from 3,232 to 1,741 and amalgamation continues to be encouraged. Australian states also reduced the number of local governments from 862 in the 1980s to the present 562. In Nepal, as already mentioned, the move towards federalism reduced the number of SNGs and established three levels of government. Some countries are putting forward strategies to foster cooperation between territories for service delivery (e.g. Australia, Japan and New Zealand). In 2019, China approved a decree to foster urban integration and coordination between rural and urban areas. On the other hand, India increased the number of states to 29 and in 2015 created the National Institution for Transforming India (NITI Aayog) to promote cooperative federalism. In Indonesia, the 2014 ‘Village Law’ gives more visibility and prominence to this tier, providing villages with a legal basis to access their own share of fiscal transfers. Bangladesh created a new division in 2015 (Mymensingh) and new municipalities by merging or joining wards through the union of villages. As part of its 2017-2018 programme, South Korea is attempting to address the regional imbalances between Seoul and the surrounding regions. Table 2 provides an overview of the number of tiers and local governments for countries in the region. There are no local governments in Singapore, Brunei, Nauru and Tonga.

Countries in the region also face the growing challenge of managing large metropolitan regions under a multiplicity of government layers. In order to address the coordination and urban management issues in such large metro areas, cities such as Bangkok, Delhi and Manila have established metropolitan development authorities whilst countries such as Australia, China, India, New Zealand, Pakistan and Viet Nam have all given special status to their capital cities and large metropolitan regions. Japan adopted a law in 2015 enabling the merger of metropolitan areas into new special entities modelled on Tokyo’s system of metropolitan governance.

**Changes in local and regional governments’ fiscal autonomy and capacities**

As a general trend in the region, the delegation of administrative powers and responsibilities is stronger than fiscal decentralization which results in critical vertical fiscal imbalances. Consequently, local governments tend to struggle with budgets and ensuring there are enough investment funds to fulfil their responsibilities.

Figure 2 shows the ratio between local and central government public revenues and expenditures for 15 countries in the ASPAC region. Nearly one third of total government expenditures and revenues are realized at the sub-national level (33% and 34% as a percentage of general government expenditures and revenues respectively). Measured in terms of GDP, the average levels of expenditures and revenues in the ASPAC region are 9% and 8.1% respectively (as compared to 16.2% and 15.9% of GDP on average for OECD countries). There is a clear gap between federal countries (Australia, India, Malaysia and Pakistan) where LRGs represent 11.2% and 10.4% of GDP for expenditures and revenues; and unitary countries, which mobilize only 8.2% and 7.2% of GDP for expenditures and revenues (and 1.5% less than this if China is excluded).

In countries where fiscal decentralization is more advanced, local expenditures and revenues correspond on average to 15.2% and 15.4% of GDP (for example Australia, Japan and South Korea). However, such figures only reach on average 1.7% of GDP for expenditures and 2.2% for revenues for less fiscally decentralized countries (e.g. Cambodia, Malaysia, Myanmar and Sri Lanka). Between these two lies Indonesia, where local government expenditures and revenues represent 8.1% of the country’s GDP. New Zealand, the Philippines and Thailand lie closer to the group of less fiscally decentralized countries whilst, in stark contrast, China and Viet Nam sub-national expenditure levels represent 21.6% and 15% of GDP respectively (equivalent to 85.4% and 56% of total public expenditure) — yet the spending autonomy of these LRGs is largely constrained by central government policies.

For the majority of SNGs in the region, spending responsibilities include general public services, public infrastructures and transport (e.g. urban management, roads and municipal facilities), environmental protection (including waste management) and management of amenities. In some countries, education, health, housing and social assistance represent a significant share of local spending (e.g. Indonesia, China, South Korea and Viet Nam). In countries with aging populations, social and health-related expenditures are increasing, as is the case in Japan and South Korea. In other countries, for example Cambodia and Bangladesh, local responsibilities are defined by law, yet most small local governments do not have the necessary resources to perform their functions. Most developing countries in the region are experiencing a growing mismatch between expenditure responsibilities and resources.

Over the past years, fiscal reforms have been implemented in the majority of countries in the region, although there are trends towards both de- and recentralization. In terms of SNGs’ capacity to raise their own resources, many LRGs in the region operate under severe fiscal

Constraints. In more economically developed countries, tax revenues are more decentralized (in Japan and South Korea, for instance, tax revenues respectively accounted for 47% and 32.8% of sub-national revenues). In federal countries, for example Australia, local taxes represent around one third of sub-national budgets, whilst in India the figure is 72%. In Pakistan, LRGs lack the capacity to collect taxes effectively. In China, local governments have very limited taxing powers although local tax represents almost 50% of local budgets. In Indonesia and the Philippines, local taxes represent a limited part of local revenues (16% and 23% respectively). In other ASPAC countries with developing economies, tax revenues are much more centralized.

Transfers reduce fiscal imbalances constitute a major part of subnational government revenues but make local governments dependent on them. In South-eastern Asia, transfers represent on average around 50% of SNGs’ revenues, ranging from 19% in Malaysia, 20% in Cambodia 62% in Thailand, 68% in the Philippines and 83% in Indonesia. With respect to more economically developed countries, transfers in South Korea represent 58% of sub-national budgets, 45% in Australia, 43% in Japan and 26% in New Zealand (compared to an average of 37% in OECD countries). In the majority of countries, how transfers are spent is often determined at the national level, reducing local authorities’ room for manoeuvre. Some countries are increasing the share of tied grants (e.g. in Indonesia, Thailand and Viet Nam), while in other countries reforms are underway to reduce the share of earmarked grants, for example in Japan. In some countries, transfers are often delayed (e.g. Bangladesh, Cambodia, Lao PDR, Myanmar and Sri Lanka), transferred erratically or sometimes not transferred at all (e.g. Nepal and Pakistan). Uncertainty
Giving local governments more fiscal autonomy is where most reform is required. This must be enhanced by strengthening LRG capacity to raise their own resources (local taxes and fees) in addition to financial transfers from central government.

and delay in transfers hinder local governments’ financial capacities, making it more difficult for them to invest in local infrastructures.

Throughout the region, local tax revenues are low and expenditure efficiency is weak. In general, property-based taxation remains significantly underutilized. City authorities have land, fixed assets and infrastructure that could potentially be used to generate funds. The booming urban property market provides a great opportunity to expand local government revenue, for which land value capture mechanisms should be put in place (e.g. betterment levy, land readjustment or tax increment financing).49

Investing is a major function of LRGs in many countries in the region. In Australia, China, India, Japan and Viet Nam for example, LRGs are responsible for over two-thirds of public investments, whilst this figure is 59% and 58% respectively in Indonesia and South Korea and 32% in New Zealand and Pakistan.

Local governments in the region can de jure engage in borrowing, generally with the approval of central government (or state/province). However, with the exception of India and the Philippines, access to borrowing is in fact limited (and very restricted in some countries such as Cambodia).50 In countries with a developed economy such as New Zealand, LRGs traditionally borrow to fund capital expenditure programmes.

Here, the Local Government Funding Agency was created in 2011 through the joint initiative of local and central governments as a debt vehicle to raise bonds on financial markets and lend to member LRGs. In India, a state-level pooled finance development fund scheme has been established by the Ministry of Urban Development to provide credit enhancement to LRGs wishing to access bond markets (e.g. Ahmedabad),51 while in the Philippines access to loans is often through Municipal Development Funds (although municipal debt is in fact limited). In China, until recently local governments had a considerable degree of autonomy over land concession revenues and could engage in indirect borrowing from banks through local government financing vehicles. However, since 2015, the Chinese government has been making efforts to control local debt.52 The use of Public-Private-Partnerships (PPPs) to finance infrastructure investment is rare (except in China).

The effect of limited access to borrowing is that even cities that have the capacity to borrow to fund economically viable critical infrastructure are often prevented from doing so by rules and regulations that do not relate to local situations but applied uniformly across countries. Such regulations have a significant impact on the competitiveness of cities and their ability to raise the capital they need to fund essential infrastructure to support development needs.

Even where fiscal decentralization has evolved in the regions, local fiscal autonomy is often constrained and has even regressed in some countries.53 To finance the implementation of SDGs, however, LRGs must play a stronger role in the mobilization of domestic resources. Effective and more equitable local taxes and efficient public spending can reinforce inclusive and accountable governance. Innovative land-based financing, for example, can contribute to raising revenues for sustainable development, particularly in cities (as for example the recent property tax reforms in Bangkok following the approval of the Land and Building Tax Act in November 2018).54

As discussed in this section, in most ASPAC countries local governments operate within constrained institutional frameworks and under the restrictive oversight of either the central government in unitary countries, or the provincial or state governments in federal countries. LRGs’ capacity to fulfil their responsibilities and improve their accountability is hampered by ambiguous and overlapping functional allocations between different levels of government; extended remits without the requisite funding; and growing conflict over the scope of decentralization. Such limitations to local action hinder local governments’ ability to carry out their assigned tasks effectively and, therefore, to contribute to the implementation of the SDGs.55

According to the CEE and UNESCAP’s assessments of progress regarding SDG implementation, giving local governments more fiscal autonomy is where most reform is needed. In order to generate revenues to finance the development of infrastructure and service delivery, LRGs’ fiscal autonomy must be enhanced by strengthening their capacity to raise their own resources (local taxes and fees) in addition to financial transfers from central government. Given the rising rates of urbanization and the limited central funds available for local development in many countries in the region, strengthening local government capacities and revenues is becoming increasingly pressing in order to improve the efficiency of domestic resource mobilization.
2.3 Multilevel governance mechanisms for implementing the SDGs

National governments are responsible for setting country-level goals and targets for the SDGs and for defining the strategy to achieve them. However, LRGs have critical responsibilities in achieving many of these objectives. The 2030 Agenda’s imperative to ‘leave no one behind’ entails a strong spatial and territorial component that makes coordination across all government levels critical for the Agenda’s realization. For this reason, it is crucial to adopt a territorial approach to local development that ensures the vertical and horizontal coordination of policies and planning strategies. This, in turn, is key to ensuring policy coherence across different levels of government. For such coordination to happen, it is necessary to effectively enact the principle of subsidiarity and enable LRGs to take action in an autonomous and accountable way. For local action to become a catalyst of global change, LRGs must be able to access different local capital sources in accordance with specific local and national contexts and institutional frameworks. LRGs’ actions will enhance resource mobilization from the national level and channel it towards sustainable development actions at the local level. They can also go the extra mile and mobilize additional resources, resulting in an easier, more effective final policy outcome.

As previously discussed, countries in the region are implementing different public administration arrangements to realize the SDGs. Top-down approaches, where the different sub-national levels of government are asked to follow national policy directives or priorities, are the most common means of promoting this process. However, more nuanced strategies and mechanisms are progressively emerging in different countries. The approach is necessarily different in the most developed Asian economies, where due to a more embedded local autonomy, there are relatively stronger initiatives coming up from local governments regarding the design of sustainable policies (e.g. in Australia, South Korea, Japan and New Zealand). The following section analyses some examples of these approaches, ranging from countries with an environment that enables LRG action, to countries where local autonomy is limited or local governments are weak.
SDG coordination and local initiatives in countries with favourable enabling environments

Japan and South Korea are both countries with relatively robust SNG capacities, but they have taken two different approaches to developing their SDG implementation strategies. Whilst in South Korea coordination initiatives are bottom-up and stem from cities, in Japan coordination strategies have been put forward under the clear leadership of the central government. Japan, whose decentralization process started in the 1990s, has specific laws governing local autonomy, with clear provisions regarding the devolution of powers. As previously mentioned, the SDG Promotion Headquarters ensures the coordination of the SDG strategy at the inter-ministerial level, while the SDGs Promotion Roundtable Meeting promotes multi-stakeholder engagement, including that of local governments. The Headquarters sets a National Implementation Framework to ensure the adoption of a ‘whole-of-government approach’, integrating the three dimensions of sustainable development (economy, society and environment). Based on a long tradition of strong collaboration between central and local governments, the Japanese government encourages local governments to incorporate the SDGs into their strategies and policies. As part of the second pillar of the Japanese SDG implementation strategy (SDG-driven regional vitalization), the government launched a new project: the ‘SDGs Models of Local Governments.’ Through this initiative, the whole of central government provides intensive support to selected local governments in their implementation of the SDGs. With the support of different programmes (such as ‘Future city’ and ‘Ecomodel city’), cities have shown a proactive interest in implementing innovative strategies and action plans to localize the SDGs, in a tradition that closely ties local government with central government policies (see Section 3.2 for more details).

In South Korea, based on the experience of the Agenda 21 and the Local Councils for Sustainable Development (created in the 1990’s), LRGs have taken the lead in promoting sustainable development. Since 2016, local governments and NGOs have developed regional actions within the frame of the Local Sustainability Alliance of Korea (LSAK). Based on the 2nd National Strategy and Five Year Plan for Green Growth (2014), in 2016 the Ministry of Environment released the Third Sustainable Development Fundamental Plan (2016-2020), designed to adapt the SDGs to national conditions. The Ministry of Foreign Affairs was nominated as the lead agency in charge of coordinating the implementation of the SDGs. The communication process between local and national bodies on sustainable development has, however, been complex and difficult. Independent national agencies manage their areas in siloes, and there exists a large degree of overlap in terms of the division of responsibilities across different levels of government. Many cities have established their own local SDG implementation system (for more details, see Section 3.2). In 2018, the new government designed a roadmap to implement the SDGs and launched a five-year Urban Regeneration New Deal with the aim of strengthening collaboration between local and national governments. In January 2018, a new Presidential Committee on Autonomy and Decentralization was set up. A revised bill, the Special Act on Autonomy and Decentralization and Local Administration, was promulgated in March 2018.

The previous discussion highlights the differences between the two countries: one with

---

**Box 1**

Chinese strategies to strengthen local buy-in of SDG policies

Within the ‘Development Plan of China’s Innovation Demonstration Zones for the Implementation of the 2030 Agenda for Sustainable Development’ adopted in December 2016, central government and local governments collaborate to develop local variations for policies, to promote innovation and drive policy learning and change. Three pilot cities have been selected: Guilin, Shenzhen and Taiyuan. These pilots should facilitate vertical coordination between the central government and provincial and city governments and horizontal coordination between different departments at both the central and local levels, as well as create greater opportunities for public participation (see also Section 3.2 below).

The process involves reform at different levels. At the national level, the State Council has issued an official document, determined the implementing ministry, confirmed the departments involved and participating organizations, and established the inter-ministerial meeting to provide support to the SDG pilot zones. At the local level, in pilot cities, legislation has been adopted to confirm the city’s overall sustainable development planning to 2030. Cities are also establishing SDG-related institutions to conduct further implementation work.

By doing this in several pilot locations, different versions of one policy or means of governance can be tested, thus developing more room for bottom-up innovation. Successful cases can then be adopted nationwide. Another tool put in place to encourage local governments to make priority choices is ‘awards competition’. Here, a city can set up a special task force or a special office for coordination. Competitions and awards help consolidate multiple targets into a clearly defined goal, promote cooperation between government departments - which usually have different interests — and mobilize greater support from stakeholders.

strong national government leadership supported by a tradition of close collaboration with local
governments (Japan), the other with important
bottom-up dynamics and difficulties articulating
local and national strategies (South Korea).

**Cross-level efforts to ensure LRG mobilization in countries with complex governance frameworks**

The SDGs pose massive governance challenges
in the large number of countries looking for new
coordination mechanisms. This is particularly the
case in very extended and complex countries such as
China, where in general a top-down approach
has been taken in the implementation of the SDGs.
In principle, national plans need to be adapted to
local levels but with central coordination. However,
the government system is unavoidably multi-
layered and covers a wide range of regions with
significant differences. Consequently, it requires
greater effort to bring local governments on board
and there is a need to develop an awareness and
understanding of the 2030 Agenda at the local
and regional level. Experience has shown that
top-down approaches can put great strain on local
government officials, who may resort to short-
term measures that are not sustainable. Indeed,
in order to implement complex policies, China is
developing a set of tools involving a mix of policy
processes instead of adopting a traditional top-
down approach. One of these is ‘pilot initiatives’,
designed to involve local governments and
facilitate experimentation (see Box 1).

In China, as in most countries, implementation
of the SDGs will demand more public finance, which
plays a vital role in investments and in catalyzing
other sources of resources. However, funding and
resources at different levels of government often
do not match. In the past, this mismatch was not
as problematic, as local governments could rely
on land revenues and borrowing money to deliver
unfunded services. However, local government
land sales and borrowing capacity have been
curtailed more recently. At the same time, the
share of total public investment with respect to
GDP has slowly started to decline, having
peaked at 46% in the period 2010–2013. These
challenges have emerged against a backdrop of
deficit reforms in the tax system and public
spending. An Intergovernmental Fiscal Relations
Act is announced for 2020 that could introduce
modifications to the framework.

Another approach combining both top-down and
bottom-up initiatives is being developed in
Indonesia, in response to the diversity of
Indonesian sub-national governance systems
spread out across this large archipelagic nation
and comprising governors, regents (heads of
districts) and elected mayors. The National
Coordinating Team and the Ministry of National
Development Planning (BAPPENAS) are in charge
of ensuring both horizontal coordination at the
national level (between over 30 ministries and
agencies) and vertical coordination between the
different levels of government and non-state
actors. Since 2015, legal reforms have been
introduced to clarify the allocation of responsibilities
between the different levels. Provinces have
supervisory functions on matters that require cross-

**Box 2**

**The Indonesian puzzle for the localization of the SDGs**

At the sub-national level, public investment is mostly undertaken
by regency and city governments, which respectively represent
1.8% of GDP and 59% of public investment. Therefore one of the
main challenges is the effective coordination of national and sub-
national development plans. In principle, SNGs must take into
consideration Indonesia’s National Medium-Term Development
Plan in their own regional development policies. To ensure the
mainstreaming of SDGs at all levels of government, a Presidential
Decree (No. 59, July 2017) requires the integration of SDGs into
the national and sub-national mid-term development plans, and
mandates the preparation of an SDG roadmap and action plans
that include clear deadlines at national, provincial, district and
city levels. More details on the mechanisms for monitoring, evaluation
and reporting at national and sub-national levels were defined in
later regulations (National Planning Ministerial Regulation No. 7,
2018), which request annual reports and bi-annual monitoring at
all levels of government. Another decree of the Ministry of Home
Affairs was issued in 2018. As of early 2019, 19 out of 34 provinces
had developed their SDG action plans (RAD) and the remaining
15 provinces were in the process of doing so. As a result of the
2018 local elections, 117 new sub-national development plans
are being drafted in 17 out of 34 provinces and 100 out of 514
districts or cities.

To support the localization of the SDGs, the government has
developed a strong communication strategy, technical guidelines
and a set of metadata indicators for each of the SDG pillars and
targets. At the provincial level, Regional Coordination Teams
(TKD) for SDG implementation have been established. They
gather together local stakeholders and are supported by the
planning agencies at provincial, district and municipal levels.
Governors’ decrees or regents’ decrees set the legal basis for
actions in many provinces. Each governor is responsible for
coordinating a regional action plan in coordination with all other
regents and mayors. Communication through provincial data
hubs using the OneData portal is designed to support follow-up,
while an SDG Academy is planned to facilitate capacity building.
However, coordination is not always effective and many problems
are emerging, as highlighted in local governments’ testimonies
(see Section 3.2).

China has attempted to strike a balance between top-down and bottom-up initiatives, as well as developing efficient policy implementation mechanisms that involve a broader range of actors.

jurisdictional cooperation. However, they do not have hierarchical authority over local governments and mainly perform coordination-related tasks. To make matters more complex, LRGs often make use of local public enterprises in order to fulfil their responsibilities: as of 2014, there were around 650 enterprises (including drinking water companies and marketplaces) owned and managed by regencies and cities and 108 owned by provinces. In light of this, the government is implementing a multifaceted strategy to promote the localization process, with a special focus on integrated planning (see Box 2).

It should be noted that in parallel, the Indonesian government has developed the National Urban Development Policy 2015-2045, aimed at closing gaps and achieving sustainable urban development with reference to three milestones: liveable cities (all cities to attain minimum standards for urban services), green cities, and smart and competitive cities. Local government associations (LGAs) consider their involvement in the process of elaboration of this strategy to have been partial.63

The case of the Philippines contrasts with that of Indonesia. The country's territorial organization is also complex, with multiple islands and territories (14 regions, the autonomous region in Muslim Mindanao, the national capital region and the special Cordillera Administrative Region) that have gone through an important decentralization process. Local governments comprise three levels — province, city and municipality and sub-municipal barangays. As mentioned above, the country is currently discussing an initiative that would involve the adoption of a federal system. The National Economic and Development Authority (NEDA) is responsible for the coordination of the SDG implementation strategy, while the Department of Interior and Local Government (DILG) supports the localization of SDGs. The SDGs are integrated in the national development plan (PDP) 2017-2022 and monitored through the Socioeconomic Report SDG Annex. The Philippines sees the localization of the SDGs as a means to reduce regional disparities. The main mechanisms for SDG localization are regional development plans and comprehensive development plans at regional and local levels. In June 2017, the national government issued an executive order requiring all levels of government to implement the PDP and public investment programme 2017-2022 (EO 27, ‘Directing all government agencies and instrumentalities, including local government units, to implement the Philippine Development Plan and public investment programme for the period of 2017-2022’). In November 2018, the NEDA and DILG, through the Joint Memorandum No. 01 Series of 2018, ‘Guidelines on the Localization of the Philippine Development Plan Results Matrices and the Sustainable Development Goals,’ spearheaded its implementation. SDG data monitoring and evaluation is managed by the Philippine Statistics Authority (PSA), which released the initial list of the SDGs for monitoring in the Philippines, and implemented it through PSA Council Resolution No. 4 Series of 2016, ‘Enjoining Government Agencies to Provide Data Support to the SDGs.’64

NEDA’s regional development offices are responsible for crafting and coordinating the regional development plans. Provincial governors usually chair the Regional Development Council, acting as the formal mechanism for coordination and multilevel governance. However, the view from local government organizations is that ‘local government units’ are not completely aware of the ongoing process, despite several workshops held by DILG in all the regions. The new matrices were launched ahead of the national and local elections (May 2019) without real consultation; and not all local governments have the capacity to respond to their requirements.65

As part of the localization efforts aimed at following up the implementation process, NEDA, DILG and the Philippines’ Statistical Office developed assessment criteria for SDG implementation linked to access to specific funds (e.g. the Seal of Good Local Governance).66 However, the alignment between the funds to support local governments’ plans and the SDGs is not clear for LRGs. Testimonies stress that local plans will continue to be aligned with the funds rather than with the national SDG strategy. On the other hand, LRGs also find it difficult to access specific funds to support adaptation to climate change and resilience projects. There is clearly a significant gap between national policy objectives and the actions taken by LRGs on the ground. There is an over-reliance on regulatory approaches instead of promoting outreach, collaboration and capacity-building efforts between national and local governments. Vertical and horizontal coordination between organizations remains patchy, producing weak linkages in planning and fragmented policy. The current electoral conjuncture and other national debates (in particular with respect to federalism) do not help the buy-in process either.67

The examples of China, Indonesia and the
Philippines serve to highlight the obstacles that are emerging with respect to supporting localization and promoting integrated planning strategies. China has attempted to strike a balance between top-down and bottom-up initiatives, as well as developing more innovative and efficient policy implementation mechanisms that involve a broader range of actors. In Indonesia, the obstacles and gaps to harmonizing the different processes have emerged as a result of strong efforts to ensure buy-in at the sub-national level and support pilot initiatives. In the Philippines, the government has pursued a stricter top-down approach. It prioritises reporting mechanisms but still devotes limited support and funding to new SDG priorities.

Policies to strengthen coordination of SDG implementation between national and sub-national governments in federal countries

In federal countries such as India, Australia and Pakistan, where each federated state has its own legal framework, the landscape for SDG implementation is just as complex. In India, the National Institution for Transforming India (NITI Aayog) — the national planning authority — has been assigned the responsibility of monitoring the implementation of the SDGs, which requires the full engagement of state governments, union territories and local government units. The central government is developing initiatives to invigorate the federal structure of the country through the promotion of ‘cooperative and competitive federalism’. The objective is to boost performance in each state by moving from a top-down planning approach to a bottom-up approach, promoting experimentation, benchmarking and the sharing of experiences across states. As a result of this push, every state and union territory (UT) has also set up a special centre, unit or team for guiding and overseeing SDG implementation. As many as 23 states and UTs have prepared their ‘Visions’ documents and action plans towards 2030. The SDG cells and committees are expected to build collaboration across sectors, departments and agencies within states’ administrations to facilitate effective inter-departmental/inter-sectoral collaboration. The involvement and participation of district administrations, rural and urban local governments in the implementation structures will need to be reinforced further (for more information on sub-national actions see Section 3.2). Different stakeholders have criticized extensively the way in which current federal programmes address many of the urban and local dimensions of SDG
Australia, has different mechanisms for policy coordination. As part of the effort to support LRGs, the Australian government released the Smart Cities Plan in 2016, which outlines a vision for productive and liveable cities by promoting collaboration between all levels of government, the private sector, research organizations and the local community. ‘City Deals’ is a key component of the plan, promoted as a collaborative approach aimed at bringing together the three levels of government to support urban policy and develop a shared vision to improve infrastructure, innovation and job accessibility in a specific geographic area. City Deals is an example of special purpose vehicle funds conceived as partnerships to leverage funds for project financing. However, many mayors argue in favour of adopting discretionary instead of nationally-targeted funding programmes to support localization of the SDGs (see Section 3.2).

In Pakistan, the National Economic Council under the aegis of the Planning Commission of Pakistan set up the National SDG Framework in March 2018. SDG units have been established within the Federal Planning Commission in Islamabad and in the four Planning and Development Departments and Boards at the provincial level. Two such units have also been established in the federally administered areas. Technical committees and thematic clusters support their work. There is no representation of district or local governments in these coordination units, but focal persons were nominated at the district level. These mechanisms are based on the National SDG Framework and are meant to facilitate alignment. However, vertical and horizontal coordination mechanisms are weak at all levels and their development faces a range of obstacles: ‘Most national and provincial policies and action plans are not backed by sufficient financial resources, and decision-making processes that are markedly top-down hamper sub-national prioritization’. Political uncertainty and the lack of a local government system (dissolved in the provinces of Balochistan and Punjab) are also significant obstacles to implementation.

**Challenges to coordination in countries with enabling environments unfavourable to local action**

Other countries with weak enabling environments at local government level, such as Bangladesh, Cambodia, Lao PDR, Malaysia, Myanmar, Nepal, Sri Lanka, Thailand and Viet Nam follow more traditional top-down approaches, with limited or no consultation of SNGs or administrations. Many of these countries have also developed national urban development strategies (such as Cambodia, Malaysia, Nepal, Sri Lanka, Thailand, Lao PDR and Viet Nam), with governance arrangements that are often unclear, to ensure synergies with other sectoral policies.

Often, countries have created ‘deconcentrated governments units’ and agencies that represent central or regional governments at territorial levels, taking on many responsibilities that in principle have been devolved to local governments (e.g. in Bangladesh, Lao PDR and Malaysia). This constrains the roles of local governments and often leads to poor vertical and horizontal alignment between national and local SDG-related priorities, hampering opportunities to create more integrated approaches in the territories.

The Government of Sri Lanka, for example, seemed very committed to the SDGs. It created the Ministry of Sustainable Development and Wildlife (MSDW) to support SDG implementation in 2015. In 2016, the MSDW launched a consultative process (the National Sustainable Development Engagement Platform) and drafted the Roadmap and National SDG Action Plan (2017-2020). The Action Plan was presented to various stakeholders at the national and provincial levels but was not implemented. In October 2017, a Sustainable Development Act was passed in parliament and it was expected that the government would establish a Sustainable Development Council (SDC) in early 2018 to ensure the development of a national strategy for SDG implementation. The Act required every ministry, department and sub-national authority to prepare an SDG strategy. However, the process lost momentum. The SDC was appointed at the end of 2018 and, despite the initial commitments, no substantive action has been taken to ensure localized and decentralized planning for the implementation of the SDGs. The Voluntary National Review (VNR) presented in 2018 claims that multi-stakeholder consultation took place in March 2018, but these consultations appear to correspond more to formalities than to real engagement. Members from provincial councils and local authorities were not explicitly consulted or engaged. Weak policy leadership and the absence of a national SDG roadmap and operational framework, exacerbated by a highly fragmented institutional structure and weak policy coordination across sectors, has created a critical gap in effectively mainstreaming and integrating the SDGs in Sri Lanka.

As summarised here, cooperation across levels of government has intensified since the adoption of the 2030 Agenda. However, the approaches taken by countries varies and range from policy efforts towards integrated planning to efforts to design better harmonized sectoral policies and enhance policy delivery to engage all levels of government, to weak or incipient national SDG
strategies with poor or ill-defined policies to promote integration by involving sub-national governments.

Within the first group, strategies range from more centralized approaches to ones that mix central guidelines with flexible approaches at sub-national levels. Often, top-down forms of vertical integration are not supported by the emergence of truly shared spaces across different levels of government that resolve conflicting priorities and reduce the gap between administrations. In contrast, more flexible policies for SDG localization focus on the need to conciliate national priorities with local initiatives and, in addition, to promote local development processes to test experiences on a small scale that might then be potentially scaled up across levels of government. This second option facilitates territorial development approaches.

This diversity reflects, to some extent, both the varied national institutional frameworks for SNGs in the region and the fact that territorial development strategies that could catalyse localization processes in most countries are still in the preliminary stages of development. Countries with more favourable institutional frameworks for LRGs show stronger mechanisms for multilevel integration (e.g., Japan) as well as SNGs that have the capacity and resources to be pro-active in the SDG localization process, even when national leadership is still limited (e.g., South Korea). In other countries, for example China and Indonesia where local autonomy is progressing, governments are exploring modalities to promote sub-national initiatives and develop pilot experiences to ensure gradual harmonization and policy coherence.

Intermediary cities are often neglected when it comes to localization strategies in the region, yet intermediary and medium-sized cities play a crucial role in the development and functioning of national systems of cities and regions. In many countries, such as Bangladesh and China, they are growing faster than large cities. Intermediary cities provide a vital connection to more than 65% of the world’s population living in smaller towns and cities and rural areas that are facing urbanization, management and development challenges. Most are not getting the resources knowledge and capacity they need to implement the SDGs. They must be given greater prominence in policy development and in the allocation of national resources, if the SDGs are to be successfully achieved in this region by 2030.

Political instability and election cycles can interfere with SDG implementation, which adds an extra layer of complexity to localization processes. Inflexible vertical hierarchies hinder the adaptation of lines of planning, implementation strategies and resource allocation to local contexts, as well as local government accountability — which is key to ensuring the involvement of local stakeholders (civil society and the private sector). Lack of clarity regarding responsibilities, duplication or fragmentation of jurisdictions and functions, unfunded mandates and weak mechanisms for reconciling conflicting priorities can generate weak or perverse incentives for local governments to adopt proactive policies. It can also lead to the adoption of short-term unsustainable policies as a response to inflexible vertical planning (as mentioned above in the case of China). In many cases, and particularly in federal countries, horizontal coordination at sub-national level is as complex and problematic as it is at national levels.

A significant criticism from local governments in the region is that they have not been adequately consulted during the preparation of national strategies that must be adapted to the territories, and in the setting of national SDGs. In more countries there are enormous disparities between SNGs with respect to development levels, as well as the capacities and resources available to them for implementing the SDGs.

ASPAC countries need to accelerate progress in the implementation of the SDGs by empowering local governments and community groups to lead territorial development processes and deliver in an integrated fashion across all the Goals and global sustainability agendas. During the Sixth Asia-Pacific Forum on Sustainable Development organized by UNESCAP (Bangkok, 27-29 March 2019), representatives from all countries reiterated their commitment to the 2030 Agenda and shared key initiatives implemented at the national and local levels, including the establishment of coordination mechanisms and the enhancement of multi-stakeholder engagement. SDGs could become the catalyst for strengthening the intergovernmental system (e.g., planning, budgeting, financial management and accountability), supporting sustainable development and improving governance.

The next section analyses more in detail how LRGs are moving towards the localization of the SDGs in their cities and territories through territorial developmental strategies.  

In many countries, such as Bangladesh and China, intermediary cities are growing faster than large cities.
03. The contribution of local and regional governments to the localization of the SDGs
Building on the findings of the previous section — which explored national strategies for SDG implementation, the institutional framework to support a territorialized approach, and the degree of vertical and horizontal integration — this section studies the processes and actions undertaken by LRGs of the ASPAC region for the localization of the 2030 Agenda through territorial development strategies.

The momentum and commitment in support of the localization of the SDGs in the ASPAC region have grown, but progress throughout the region has been uneven. Several countries have advanced in implementing the SDGs at the local level, making significant progress in awareness-raising and local plan alignment with the Goals. Most local governments in Asia-Pacific, however, still do not know the SDGs, or at best have a limited awareness of them and how they link to their daily tasks. Only front-running cities and regions have advanced to the operationalization and implementation stage of the SDGs; and even at this stage, in many cases, implementation has consisted basically of ‘retrofitting’ the SDGs into existing projects and activities (often supported by the Millennium Development Goals, Agenda 21 and other global development policy frameworks). Moving from commitment or alignment to concrete territorial strategies that operationalize the agendas into the daily initiatives and lives of their communities has been the most challenging step for most LRGs in the region. Local governments are expected to learn how to prioritize programmatically and, given the limited amount of resource, often have to ‘choose’ which SDGs are actually applicable in reality. This section focuses on the initiatives local governments are implementing to overcome these challenges.

3.1 Awareness-raising and SDG ownership: the role of LRG networks and partners

LGAs and regional associations in Asia-Pacific are playing an active role in the localization of the SDGs and the establishment of territorial development strategies. A wide range of actors from different contexts and at different levels are contributing to the emergence of new initiatives, supporting dissemination and training and providing technical assistance: regional organizations (e.g. UNESCAP, Association of Southeast Asian Nations — ASEAN, Asia-Pacific Economic Community — APEC, the Asian Development Bank - ADB); the ASPAC section of UCLG (UCLG ASPAC), Citynet, the regional offices of global organizations (e.g. International Association of French-speaking Mayors — AIMF, C40, the Commonwealth Local Government Forum — CLGF, Local Governments for Sustainability — ICLEI and Regions4SD); other networks working with local governments (e.g. LOGIN); and local government partners. UCLG ASPAC regularly organizes forums, produces publications and promotes training as part of its commitment to raise awareness of the global agendas. It has also provided support to specific national programmes (Indonesia and Pakistan, for instance, analysed in detail below). As mentioned in Section 2, it carried out an assessment of 28 countries in the region to explore whether the national legal and institutional environments have in fact been conducive to the localization of the 2030 Agenda and the New Urban Agenda. Citynet has promoted training actions and study trips; with UNESCAP and the Seoul Metropolitan Government it has supported the Urban SDG online portal, a tool for knowledge-sharing and city-to-city cooperation for sustainable urban development in the region. LGAs have also promoted greater involvement of local governments in regional mechanisms through, for example, the ASEAN Mayors Forum and the UNESCAP Forum, as well as via capacity-building actions. The United Nations Development Programme (UNDP) and the ADB, together with other international institutions (e.g. the German Society for International Cooperation - GIZ) and agencies, are implementing several projects for the localization of SDGs at the regional and national level.

In the Philippines, both the League of Cities and the League of Municipalities have been active in SDG localization through seminars, information sharing, conferences and workshops. The League of Cities has developed pilot projects with different partners to promote integration of the SDGs into local activities, for example the Vertical Integration for Low-Emission Development (V-LED) in collaboration with UN-Habitat; the Building Climate Resiliency Through Urban Plans and Designs programme with the support of German cooperation agencies and UN-Habitat; the Ambitious City Promises project with ICLEI; the Global Initiative for Resource-Efficient Cities with the United Nations Environment Programme (UNEP); and the ‘Green, Green, Green’ project of the Philippine Department of Budget and Management, amongst others. The League of Cities, moreover, co-leads Citynet’s SDG Cluster.

The Association of Cities of Viet Nam participated in several national workshops and, in 2018, organized two meetings on SDGs in the Mekong Delta region and in the country’s northern region. Other associations in the sub-region are still at quite a preliminary phase. In Cambodia, the National League of Communes (NLC) has included the SDGs in its five-year strategic plan (2018-2022) which, to date, has not been implemented. The Malaysian Association of Local Authorities (MALA) has worked on connecting...
local governments with international activities linked to the SDG framework in, for example, Seberang Perai and Penang. In East and North-eastern Asia, the Republic of Korea has historically been very active, particularly through the LSAK and as part of international networks such as ICLEI, Citynet and UCLG. LSAK is the network organization for Local Agenda 21 and includes Korean local governments and CSOs. The network provided its members with a platform to share knowledge and information and better integrate the SDGs into their policies and programmes. The Korean Institute Centre for Sustainable Development (KICSD) has, finally, developed various training courses and research projects on the SDGs and other themes related to the development agendas.

In South and South-western Asia, the All India Institute for Local Self-Government (AILSSG) coordinates 26 centres responsible for education, research and capacity building for local urban bodies. The Institute is developing a learning agenda and provides technical assistance for sustainable local governments, linking the SDGs with key Indian programmes (e.g. AMRUT, PMAY, EQUI-City, Smart Cities Mission, Swachh Bharat Mission, and the National Urban Poverty Reduction Programme). In Pakistan and Bangladesh, a range of conferences and workshops have taken place during the past year with the support of international agencies and national government. Local authorities from all the provinces of Pakistan gathered at a Local Government Summit in Islamabad in March 2017 in support of localization and with six major issues to address: education, employment, energy, water, peace and governance. In April 2018, with support from UNDP and GIZ, UCLG ASPAC and the Local Council Associations from Pakistan’s four provinces organized an international conference, ‘Think Global, Act Local — SDG Implementation though Local Governments’ where delegates from Pakistan’s local governments discussed the role of LRGs in the achievement of the 2030 Agenda, debating with delegates from over a dozen countries in the ASPAC region. UCLG ASPAC, in partnership with the Association for the Development of Local Governance (ADLG) of Pakistan, launched a flagship initiative in March 2019 — the Local Empowerment, Advocacy and Development for SDG Localization (LEAD for SDGs) — a four-year project with the support of EU funding. The project will assist local governments, their associations — the Local Council Association of Balochistan (LCAB) and the Local Council Association of Sindh (LCAS) — and other stakeholders to localize the SDGs. In Sri Lanka, the Federation of Sri Lankan Local Government Authorities (FSLGA) developed several awareness-raising workshops and pilots to integrate the SDGs into local plans and budgets in two provinces. In Nepal, the three existing associations – the Association of District Development Committee of Nepal (ADDCN), the Municipal Association of Nepal (MuAN) and the National Association of Rural Municipalities in Nepal (NARMIN) — are making efforts to disseminate the SDGs. NARMIN, for example, adopted the 15 Points Directives to Rural Municipalities for the mainstreaming of the SDGs into the local planning and monitoring process (in the fields of health, sanitation and nutrition).

In the Pacific region, the associations of local governments in Australia — ALGA, the Western Australia Local Government Association, and the Council of Capital City Lord Mayors — worked with the federal government to contribute to the reporting process in 2018, gathering experiences at the local level. In New Zealand, Local Governments New Zealand (LGNZ) formed part of the reporting unit to the United Nations High-Level Political Forum on Sustainable Development (HLPF) in 2019 and was asked to present its own contribution to the report. The association has publicised the SDGs to its members. It developed a toolbox to assist local authorities to meet the challenges of sea level rises and extreme weather events, with advice on adaptation and mitigation, and is leading a project designed to improve the quality and safety of water supplies, in addition to a project to improve access to quality affordable housing. The Society of Local Government Managers has developed a national set of indicators that aligns closely to the SDGs and has distributed these to all councils to enable them to provide annual monitoring reports. In Kiribati, the local government association (KiLGA) has ensured the dissemination of the SDGs through its monthly newsletters, radio, forums and workshops and its executive director participated in the process of drafting the country’s VNR in 2018. In 2018-2019, the KiLGA helped ten councils put together their development plans aligned with SDGs and, with support from the United Nations Children’s Fund (UNICEF), assisted five councils to develop their water, sanitation and hygiene (WASH) policies and development plans aligned to the SDGs.

In July 2019 in Nadi, Fiji, the 5th Pacific Urban Forum was held in partnership with the Government of Fiji, UN-Habitat, UNESCAP and other partners. It concluded with voluntary commitments to support cities in localizing the 2030 Agenda as well as a declaration for the Pacific Island Forum Secretariat to support the institutionalization of local government concerns in the region. It also created the Pacific Partnership for the New Urban Agenda with the support of CLGF.
The preparatory phase of localizing the implementation of the SDGs involves a wide range of activities — from gap analysis and alignment of the SDGs with local plans to outlining innovative strategies and programmes. In light of this, this section provides an overview of where the region’s countries stand with regard to the involvement of LRGs in the preparatory phase of SDG implementation. It explores the extent to which the region’s various countries have been including LRGs in the process of alignment of their development plans with the SDGs. This section first introduces the countries that have clear national strategies, are making efforts to target LRGs, and are making faster progress in the preparatory phase and have aligned the SDGs with their sub-national plans (e.g. Japan, Indonesia and China). In South Korea, LRGs are taking the lead on the back of the legacy of the Local Agenda 21 movement. LRGs in other countries such as Australia and New Zealand are also progressing at a different pace, building on their experience of sustainable policies. In India and Viet Nam, top-down strategies are leading to a growing gap between the state or provincial level and the local level (districts or local governments units) in the SDG implementation process. There are also challenges and uncertainties hindering local government engagement in three other countries — the Philippines, Pakistan, and Sri Lanka. In the Philippines, LRGs tend to be more involved in projects, with little account taken of the full SDG framework: ‘beyond project-based targets, there are limited efforts to align the SDGs with the planning, financing and monitoring frameworks’. It is essential here to build awareness of the many examples of initiatives in this context.

Examples of joint national-local efforts to align SDGs with sub-national development plans

As mentioned above, LRGs in Japan, Indonesia and China have moved faster as far as alignment efforts are concerned. In Japan, over 30 cities and towns are involved in the implementation of the SDGs, with the support of the national government through the ‘Future City Initiative’ (a product of the pre-existing ‘Eco-Model Cities’ programme), with a special focus on environment, aging population and the involvement of the private sector and civil society. The city of Yokohama has been amongst the most committed, with its ‘Yokohama Future City’ initiative focusing on environment, care of the elderly and culture. Many other local governments are promoting initiatives through outreach campaigns aimed at local stakeholders, emphasizing the importance of the SDGs for local development (e.g. Shiga and Nagano, Sapporo, Otsu and Omihachiman). Hamamatsu — known as ‘SDGs Miraitoshi’ or ‘future city’ — aligned its strategic plan with the SDGs in order to promote...
the preservation of forestry, cleaner energy and interculturalism.\textsuperscript{106} Three cities — Toyama, Kitakyushu and Shimokawa — launched their Voluntary Local Reviews in 2018 (see Box 3), and Hamamatsu launched its VLR in 2019. Over the period 2019-2020, Japan will also revise its SDGs Promotion Guiding Principles.

In Indonesia local governments are required to act by Presidential Decree No. 59 (see Section 2.3) and are making efforts to integrate the SDGs into provincial and local plans.\textsuperscript{106} After the 2018 local elections, 17 provinces and 514 districts worked to mainstream the SDGs into their new local and regional plans. At the start of 2019, 19 out of 34 provinces had developed and formalized their SDG local action plans. Fifteen more provinces are in the process of completing their SDG local action plans. As mentioned previously, the LOCALISE SDGs project has, since 2018, worked in 16 provinces and 14 cities (see Figure 4). The project aims to develop training and knowledge-sharing, support the preparation of SDG local action plans through technical assistance and networking, as well as follow up the status of SDG implementation and formulate strategy recommendations to localize the SDGs programme.\textsuperscript{107}

The LOCALISE project carried out a survey on the status of SDG implementation, which concluded that the provinces (11 out of 16) — particularly in West Indonesia — have a higher implementation rate than the cities. Only three cities — Jambi, Bengkulu and Pangkalpinang — have a high score in terms of implementation. There is also a gap between eastern and western local governments: the majority of western provinces have launched and prepared their own RADs, whereas in eastern provinces, only a few are doing so. While the majority of provinces mentioned that they had benefitted from an enabling environment in terms of developing regional plans, they also faced critical obstacles. The survey found several issues still pending.\textsuperscript{108} Data has generally not been adapted to the requirements of the indicators. Moreover, limited access to financial resources in the region has hindered bottom-up participation. More generally, different local governments have different timelines for their regional long-term development plans, so that several regions have not yet included the SDGs in their regional planning strategies. In addition, local governments have limited authority to implement local action plans at the provincial level: this either makes the plans too distant from the local context, or gives them a set of indicators that are not relevant to the actual monitoring needs of local governments. As regards monitoring, both medium and long-term regional plans have not been properly reviewed. As a result, local governments are not able to fully adapt them to their vision of the localization challenges ahead and, in any case, there is

  - Kyoto City (1,470,000)
  - Amagasaki City (451,000)
  - Kobe City (1,542,000)
  - Nishiawakura Village (1,600)
  - Matsuyama City (513,000)
  - City of Kitakyushu (970,000)
  - Osaka Town (7,800)
  - Minamata City (27,000)
  - Yusuhara Town (3,800)
  - Sakai City (840,000)
  - Ikoma City (121,000)
  - Shimokawa Town, Hokkaido (Population: 3,650)
  - Obihiro City (168,000)
  - Iida City (103,000)
  - City of Tsuchiura (217,000)
  - Chiyoda City (50,000)
  - City of Yokohama (3,690,000)
  - Mitake Town (19,000)
  - Toyota City (420,000)
  - Miyako Island (52,000)

* Figures in parentheses show the population of each city.

generally weak reference to SDG indicators. This has been exacerbated by the lack of training initiatives overall — i.e. institutions or activities that increase awareness and understanding of the SDG framework across local government. These issues are compounded by the immense diversity and complexity of Indonesia’s geography, which has significantly undermined cooperation and mutual learning. As a result, current regulations have not tended to assimilate more of the SDGs and their overall view of development, which in turn has curbed attempts by local governments to adapt, integrate and coordinate a more bottom-up approach to SDG-based regulation at the local level.

One example mentioned in the Indonesian VNR is East Nusa Tenggara Province and the rapid development of a Regional Mid-Term Plan 2018-2023 aligned with the SDGs and regional priorities. One of the key problems here was indicators and the need to make adjustments taking into account the availability of data. Jakarta has integrated the priorities of the national plan and the SDGs into its mid-term plan (RPJMD), supported by a participatory approach (e-Musrenbang, participatory electronic budgeting and planning). Other cities are more focused on specific actions related to SDG 11 — such as Balikpapan, Surabaya, Palembang, Semarang, Yogyakarta and Bogor.

China reported in 2016 that SNGs are elaborating their own five-year plans in accordance with the blueprint of the Chinese government’s 13th Five-Year Plan, which is already aligned with the 2030 Agenda. At the same time, as mentioned above in Section 2.3, after the adoption of Innovation Demonstration Zones for the implementation of the 2030 Agenda, 16 cities applied to be part of it and on March 2018 the first three SDG pilot cities were chosen. These were: the city of Guilin, with a project focus on innovations in natural landscape conservation, eco-tourism and ecological agriculture; the city of Shenzhen, centred on sustainable development and good megacity governance driven by high-tech innovation; and the city of Taiyuan, focused on improving water quality and the atmospheric environment, including the surrounding ecological environment and tackling five types of pollution in the territory. The experiences of these cities will be rolled out to the rest of the country and ten demonstration zones built during the 13th Five-Year Plan period. The process is strongly supported by UNDP through awareness raising (Massive Open Online Courses), assessment support, training and workshops (involving 1,337 public officers in 41 counties and three provinces), advisory services, follow-up during the implementation process (1-2 years) and certification (SDG Seal).

Other cities and provinces in China are competing in different areas to foster sustainable development through ambitious and innovative programmes e.g. Deyang, Yiwu, Haiyan and Huangshi as resilient cities; and Chengdu, Nanhu,
Zhejiang Langzhong, Libo and Chibei as models for international sustainable pilot cities (some of these examples will be developed in Section 3.3). According to the Provincial and Large and Medium Cities Sustainable Development Ranking 2018 Annual Report, Beijing, Shanghai, Zhejiang, Jiangsu, Tianjin, Guangdong, Chongqing, Shandong, Fujian and Anhui rank top ten in terms of sustainable performance among provinces and metropolitan cities. According to the ranking, the most developed and wealthy regions, such as Beijing, Shanghai, the Pearl River Delta and other coastal cities, ranked the highest. Coastal cities on average have better environmental quality than inland cities, whilst cities in the central and western regions are facing severe environmental pressures because they have less capacity to protect resources and the environment and to manage consumption, all of which are crucial to sustainable development.113

A bottom-up led model of sub-national engagement in the localization process

In South Korea, since 2015 local governments have begun to revise their strategies to include SDGs as a core value and establish local SDG implementation systems (see Table 3). As mentioned above (Sections 2.3 and 3.1), there is a longstanding tradition in South Korea of sustainable agendas.114 As of 2016, 210 of 243 local governments have formulated their local Agenda 21 and around 100 local governments established local councils for sustainable development involving civil society and the private sector.115 These local councils are not, however, recognized as local governmental organizations. Therefore, the Framework Act on Low-Carbon and Green Growth (LCGG Act, established in 2010) also required the formation of Local Committees on Green Growth in 17 metropolitan and provincial governments, but this has had limited impact.

Policies in Seoul are summarized in Box 4. Two analyses identify similar factors hindering stronger action on the part of LRGs: limited awareness and support; lack of connection between local policies and regional development plans as well as national policies; shortfalls in budget and personnel; weak implementation capacity and the absence

Type A - Implementation: Operational system (implementation, modification of the plan, indicator development, evaluation system).
Type B - Transition: Building a system for implementation (establishing plans and strategies to implement sustainable development, education for public officers and citizens).
Type C - Preparation: Establishment of foundations (basic ordinances, definition of institution, Commission on Sustainable Development, etc.).
Source: KDI (February 2018), Establish guidelines for the implementation of the SDGs by Local Governments, Final Report, p. 189 (in Korean).
The 2030 Seoul Master Plan and the Seoul Sustainable Development Goals

Since 1995, the Seoul Metropolitan Government (SMG) has led efforts to build a sustainable city, with a population of 10.1 million people. The first Sustainable Development Commission (2013-2015) established the Master Plan for Sustainable Development in 2015 and evaluated the sustainability of Seoul based on the Sustainable Development Indicators System. The second Sustainable Development Commission (2015-2017) focused on implementing the Master Plan for Sustainable Development. In 2017, the Seoul SDGs were established using a bottom-up approach and the SDGs were merged into Seoul’s policies, plans, and administration and moved through the cycle of implementation, evaluation and revision. The 2030 Seoul Plan was developed by citizens at each stage of the planning.

To realize the future vision, five core issues were identified: ‘people-centred city without discrimination’, dynamic global city with a strong job market, vibrant cultural and historic city, lively and safe city and stable housing and easy transportation, ‘community-oriented city’.

To respond to this challenge, the Seoul Metropolitan Government (SMG) has developed the 2030 Seoul Master Plan and the Seoul Sustainable Development Goals (2030). The former provides a roadmap for local and national governments to implement sustainable policies and the latter focuses on Sustainable Development Goals (SDGs) as a framework. The core goal of this new plan is to integrate the SDGs into local and national governance bodies and to develop adequate regulations; introduce stable budgets; and strengthened public-private cooperation and joint efforts at monitoring.

Initiatives have generally been generated by the environmental department. Efforts are now underway to retrofit the strategy to respond to the new SDGs framework with a view to developing a more integrated approach. But this is likely to take time (as demonstrated by Table 3, which classed the majority of local governments as being in the transition or preparatory stage).

Taking advantage of local sustainable initiatives in countries that are still defining national localization strategies

While LRGs in Australia and New Zealand are progressively referring to the SDGs as a framework, they are already implementing different initiatives and programmes with sustainable policies aligned to the SDGs. In Australia, cities such as Sydney, Melbourne and the Eastern Metropolitan Regional Council, have joined the Climate Council’s Cities Power Partnership, which encourages, motivates and accelerates local initiatives in emissions reduction and clean energy. However, as acknowledged by the Australian Local Government Association, ‘many councils have been slow on the uptake to integrate the SDGs into their planning process and community strategies’. The Australian government has been active in recent years in catalysing the development of Smart Cities through its City Deal and Smart Cities and Suburbs programmes.

In New Zealand, Local Government New Zealand publicized the SDGs to its member councils to support the preparation of the VNR in 2019. In fact, local councils have been active in developing sustainable policies for some time. In 2014 Auckland Council adopted the Living Lightly and FutureFit programme, encouraging Aucklanders to shift to a low-carbon path by proposing six climate action themes (Move, Shop, Eat, Energy, Grow and Talk) to change lifestyles. In addition, its Waste Management and Minimisation Plan 2018 has a vision for the city to be zero waste by 2040. The Greater Wellington Regional Council has adopted an electric-first policy for its own vehicle fleet and has invested in electric buses to replace diesel buses. Its biodiversity strategy Our Natural Capital aims to reduce predators and protect threatened species through mobilizing community action. Rotorua Lakes Council has established an innovative partnership with the indigenous people of its district, the Te Arawa Iwi, which provides Iwi with a voice in the policy and decision-making processes of the council. In 2017, New Zealand local leaders launched a Local Government Leaders’ Climate Change Declaration to support initiatives to reduce greenhouse gases and commit locally to respond to climate change. As mentioned above, local authorities have also completed an assessment of the amount of under and above ground infrastructure that will be affected by sea level rises, based on three different scenarios. Discussions between local and central
government are underway to identify options for meeting the costs involved and providing councils with the powers to halt development in areas likely to be affected by sea level rise in the future. Through the Urban Growth Agenda (UGA), the New Zealand national government is seeking to implement the New Urban Agenda. All cities and local government areas should promote direct public participation in urban planning processes. Other priorities include waste reduction, improving air quality standards, universal access to green and public spaces, age-friendly communities and better access for persons with disabilities. The national government has committed USD 47 million for local council initiatives. Projects must have at least 50% co-funding and be up to five years in duration.

In 2019, New Zealand’s national government adopted its first first ‘well-being’ budget based on its commitment to protect human, natural, physical and social capital, and has developed a programme of local and national indicators to assess progress.

**Top-down SDG strategies and the widening gap between intermediary and local levels**

India and Viet Nam are two examples of countries where the alignment process is taking place at provincial or state level, widening the gap with local governments. For example, in **India** there is a significant difference between the involvement of state level and local government bodies. As mentioned in Section 2.3, almost all states and union territories (UTs) have set up a special centre, unit or team to coordinate SDG implementation. Twenty-three states and UTs have prepared their Action Plans or Vision 2030 documents; six states have developed or are in the process of developing an SDG monitoring framework; 15 states and Delhi’s UT have worked on specific indicators; and nine states have reported interventions related to aligning their budgets with the SDGs. In contrast, the involvement and participation of district administrations, rural and urban local governments is lagging behind. There is common agreement that representatives of Panchayati Raj institutions and urban local bodies and community organizations need to be more systematically included in the implementation process and receive capacity-building support. “Despite these attempts, localizing SDG indicators at the state or the urban scale remains quite limited in India”. The situation in small towns and villages is even more critical.

In **Viet Nam**, twenty-two provinces issued their provincial action plans for implementing the 2030 Agenda for Sustainable Development. Following the Prime Ministerial Decision on the National Action Plan for Implementing the 2030 Agenda (No.622/QD-TTg, 10 May 2017), provincial governments are the key coordinators at the local level for implementing and reporting on the achievement of indicators to central government. Provinces direct implementation and reporting in the cities and towns under their jurisdiction.

**Limited local government initiatives in countries facing significant uncertainties and an adverse institutional environment**

In other countries in the ASPAC region, LRGs are also taking action but in more difficult circumstances and with more limited capacities. In the **Philippines**, despite the national executive order (Order No. 27) requiring all levels of government to implement the national development plan (PDP) aligned with the SDGs, the current political context and existing mechanisms mean they face some difficulties (see above Section 2.3). However, since 2015 the Department of Interior and Local Government (DILG), in partnership with the League of Cities, the Local Government Academy and several international agencies has been promoting the SDGs in over 34 cities as a follow up to the MDG FACES programme (focused on children in poor urban communities). For example, the cities of Naga, Iriga and Muntinlupa have made efforts to incorporate SDGs into their development plans. They have introduced a system of (local target) scorecards to gather baseline data on governance. The scorecards evaluate whether development plans are aligned with the SDGs. Similarly, in 2017, the Galing Pook Awards Programme shortlisted 30 municipalities and barangays that have developed initiatives complying with the three pillars of sustainable development in different areas: participatory governance (Angon, San Fernando), poverty reduction (Zamboanga del Norte and del Sur) and economic development (Tagum City), support to informal workers (garment sector in Taytay) and poor communities (fisheries in Ambao, youth in Ilocos Norte), access to basic services (water in San Luis, waste management in Makati, transport in Legazpi, road maintenance in Davao), affordable housing (Quezon) and slum upgrading (Dipolog City), sustainable tourism (Loboc), urban renewal and green cities (Pasig), clean food (Marikina) and, finally, inter-municipal cooperation for better services (PALMA Alliance in the Cotabato Province). Other local governments are also active and follow a range of programmes supported by international institutions and local government organizations (such as the League of Cities) related to sustainable policies e.g. Angeles City, Tagum, Legazpi, Ormoc, Cagayan De Oro, Pasig, Parañaque and Marikina for climate mitigation and adaptation and resilient initiatives. Other examples include Sorsogon, a pilot city for the
Global Initiative for Resource Efficient Cities; the city of Cebu for solid waste management; the cities of Baguio and Quezon for planned sanitation and tourism through PPPs, and others. But these represent individual one-off projects rather than an integrated approach that refers to the full SDG framework.

In Sri Lanka, the SDG Action Plan developed in 2016 envisaged the development of provincial sustainability plans to showcase examples of good practice in implementing SDGs and sustainable villages at the local level. In 2016 and 2017, senior officials of provincial councils and local authorities were trained in mainstreaming and integrating the SDGs, but this has taken place on an ad hoc basis. The level of awareness and engagement of provincial councils and local authorities of the SDGs is still low and no substantial efforts at local sustainability planning have been initiated. Local governments face a lack of clearly defined, devolved and decentralized SDG processes from central government. As discussed in Section 2.3, the formulation of provincial sustainability plans has not been effectively pursued. A preliminary attempt to establish a cluster of sustainable villages in Pannala in the Kurunegala district also failed, creating a gap in regional and local sustainable development planning. The limited initiatives developed in 2019 by the national association FSLGA (mentioned above in Section 3.1) risk being suspended due to insufficient financial support, and there is no clear vision of what LRGs need to do; a roadmap is not sufficient if there is not the means for action.139

In Pakistan, district/local governments are not associated with the SDG coordination units created at provincial level. Following the Local Government Summit on the SDGs in Islamabad in March 2017 and an international conference in April 2018 (see Section 3.1), local governments’ awareness of the SDGs increased, creating more political space for LRGs in SDG implementation. However, the lack of legal and financial frameworks weakens the localization of the national agenda in provincial plans and the development of localized territorial strategies. There are huge challenges of coordination within the four provincial governments in terms of strategies, monitoring and reporting mechanisms. There is no mechanism to track the progress of SDG implementation due to lack of data availability at central and local levels, and local governments were not involved in the reporting process in 2019. It is expected that the LEAD initiative for SDG implementation launched in March 2019 will help to assist local governments and their associations in the future.140

Monitoring local initiatives

The lack of reliable data to effectively measure progress towards the SDGs remains one of the region’s biggest challenges. Despite a significant increase in the availability of SDG indicators since 2017 - including disaggregated data - data gaps remain for two thirds of the global SDG indicators.141

Data management systems at the sub-national and local levels are ‘relatively dysfunctional, especially with the use of quantitative indicators to measure results and progress.’142 However, some initiatives at local level are emerging. China selected Deqing County as a pilot study area in 2017, the aim being to comply with the UN Global Indicator Framework and provide a good example for measuring the overall progress towards the SDGs using geo-statistical data and methods that could be shared and replicated across the world.143 In New Zealand, for instance, the Society of Local Government Managers has already developed a national set of indicators that align closely to the SDGs, and that have been distributed to all councils to enable them to conduct annual monitoring reports. At a national level, Indonesia has created a OneData portal as a data hub, coordinated by the National Development Planning Agency and the National Statistics Bureau. This will allow districts, municipalities and provinces to gather, compile and report on the correct indicators in line with the SDG and national development indicators.
3.3 Local actions for the implementation of SDGs (operationalization stage)

Operationalization of the SDGs involves turning visions and plans into actions. Actions may include re-working of current sustainable development initiatives started prior to the adoption of the 2030 Agenda, or new projects and programmes to support the localization of the SDGs and other global initiatives. The latter include the Paris Climate Agreement and the Sendai Framework for Disaster Risk Reduction Agreements.

This section highlights selected examples of LRG initiatives that contribute to the operationalization of the SDGs through integrated territorialized policies. There is particular focus on Asian cities, which have emerged as centres of innovation and prosperity but are also where major challenges are concentrated. The examples focus in particular on climate change, resilience and energy challenges (contributions to a sustainable planet), sustainable infrastructures (prosperity), and inclusiveness (a people-centred agenda). They cover a limited range of development issues but provide insights into the extent of efforts to localize the SDGs in the region. Preference has been given to initiatives that are outcome-driven and include cross-sector approaches to maximise policy complementarities and synergies between sectors, in line with the SDG principles.

Sustainable cities and territories for a sustainable planet

Recent assessments highlight the need for the ASPAC region to accelerate the path to achieving the goal of sustainable cities. SDG 11 and the New Urban Agenda require more integrated urban planning and inclusive urban governance. The impact of sustainable cities goes far beyond SDG 11 (ten of the 17 SDGs are linked to SDG 11). Moreover, taking into account the speed and scope of urbanization in the region, the world’s sustainable development prospects increasingly depend on how Asian and Pacific cities are managed, and how they adopt more sustainable and inclusive patterns of development.

As discussed in Section 3.2, frontrunner cities stand out in their efforts to align their plans with the SDGs and build more integrated approaches through planning and combined sectoral policies. Visionary local governments are taking the lead, for example Seoul, which has revised its masterplan using the SDGs as a framework, adopting people-centred policies (see above Box 4). Other cities have adopted integrated planning approaches both with and without reference to the SDGs. Guangzhou’s One Plan for All strives to promote coordinated economic, social and environmental development. Other cities, both large and small — e.g. Toyama Compact City Strategy (Japan), Sustainable Sydney 2030 (Australia), Da Nang Sustainable City (Viet Nam), and Naga Comprehensive Land Use Plan (the Philippines) among others — are fostering more coherent urban sustainable policies.

Table 4 groups the efforts of cities to localize the implementation of SDG 11 under ‘umbrella’ sustainability themes. These include eco, green, inclusive, innovative, liveable, resilient, safe, smart and sustainable cities. Many cities in the region have adopted these terms as concepts and brand names to emphasize the implementation of SDG 11 and other agendas.

Many of these sustainable city initiatives predate the introduction of the SDGs, but they represent an important legacy of programmes. Many cities rebranded their image in response to a need to adapt their old declining economic activities to new regional and global economic trends. Some cities adopted a broad and comprehensive policy framework in order to ‘green’ their economies and become smarter cities promoting new technologies.

This legacy encompasses different concepts of sustainability. Moreover, the region has different traditions and city models, for example dense and compact cities versus extended and sparse urban areas. Poor urban governance and weak regulatory frameworks represent one of the biggest obstacles to the implementation of the SDGs. Many cities in the region are experiencing growth without...
any holistic urban plan (e.g. only 24% of Indian cities have masterplans). Persistent challenges (unplanned urban expansion, demographic trends, persistence of poverty and inequalities, services and infrastructure deficits, degradation of natural resources), coupled with climate change and the region’s vulnerability to natural disasters, increase the likelihood that the development gains of the last decade will be rolled back.\textsuperscript{160} Below is a brief review of initiatives in two areas central for sustainable cities in the region.

### Climate Change

Little progress has been made with Goal 13 in the ASPAC region between 2000 and 2018.\textsuperscript{161} The region has countries

Source: Gong, W. et al\textsuperscript{157} (2016) adapted to include SDG sub-goals
both contribute to over half of the world’s total greenhouse gas (GHG) emissions, but are also
globally and highly exposed to the damaging impacts of climate change.\textsuperscript{162} The heatwaves in Delhi (India) and Melbourne (Australia) in 2019 are examples of this. Both
adaptation and mitigation measures require massive infrastructure and social investment.\textsuperscript{163}
In 2019, 130+ cities in the ASPAC region made commitments to the Global Covenant of Mayors
on Climate and Energy (GCoM) to develop mitigation and adaptation policies.\textsuperscript{164} South-
eastern Asia is the sub-region with a large number of SNGs committed to this, including key
metropolitan areas (e.g. Jakarta, Surabaya, Kuala Lumpur, Quezon City, and Can Tho), regions (e.g.
Iskandar), and intermediary and small cities (e.g. Probolinggo and Bontang in Indonesia, Putrajaya
in Malaysia, Borongan in the Philippines, and Phuket in Thailand).\textsuperscript{165} In Indonesia, an intensive
mentoring process was implemented in 34 provinces to ensure the integration of the national
action plan for GHG emissions in regional and local development plans.\textsuperscript{166}
In East Asia, Japanese cities have been involved in climate change action for a long time.
Tokyo’s Climate Change Strategy is attempting to reduce final energy consumption (which
has decreased by 21.1% since 2000) and CO\textsubscript{2} emissions (which decreased by 36.1% between
2000 and 2015). At the same time, renewables account for more than 11% of final electricity
consumption, largely due to the increase in solar energy production capacity.\textsuperscript{167} In South
Korea, many cities have made commitments.\textsuperscript{168} In Changwon, the 2020 Environmental Capital
initiative launched in 2008 planted millions of trees and reduced air pollution, urban
noise and average summer temperatures by about 3 to 7 degrees celsius.\textsuperscript{169} In China, a
recent publication by the ADB highlighted 50 projects implemented by Chinese cities that
have successfully implemented effective GHG reduction strategies and environmental
improvement measures. Chinese cities are committed to a reduction of 318 million
tonnes of CO\textsubscript{2} equivalent per year by 2030.\textsuperscript{170} In South Asia, several cities and states have
made commitments, although the majority are only in the preliminary phases.\textsuperscript{171} The Indian
Government supports different programmes to promote renewable energy and energy
efficiency.\textsuperscript{172} In the Pacific region, Brisbane, Melbourne and Sydney — along with 20
other Australian local governments — have implemented climate change initiatives.\textsuperscript{173} In
New Zealand, local governments adopted a strong statement to support climate change responses.\textsuperscript{174} In 2015, the Greater Wellington Regional Council (GWRC), launched its Climate
Change Strategy and Implementation Plan.
LRGs also play a role in the preservation of forest ecosystems (e.g. the Melbourne
Metropolitan Urban Forest Strategy). The Khyber Pakhtunkhwa province (Pakistan) surpassed
the objective of the project ‘one billion tree tsunami’, initiated in 2014. The major impact of this success
also triggered a national reforestation campaign, ‘Plant for Pakistan’.\textsuperscript{175}

**Resilient cities.** Since 2005, the ASPAC region has recorded almost 60% of total global deaths,
with 80% of people affected and 45% of total economic damage due to natural disasters.\textsuperscript{176} The
number of urban residents potentially facing high or extreme multiple hazards is currently around 742
million, and could reach nearly 1 billion by 2030.\textsuperscript{177} The ‘Making Cities Sustainable and Resilient
Campaign’, launched by the UN Office for Disaster Risk Reduction (UNDRR - formerly UNISDR) and UN-
Habitat, was highlighted in a report to the HLPF and involves more than 400 cities in the ASPAC region
(the majority in South and South-eastern Asia).\textsuperscript{178} The campaign seeks to build the capacity of local
governments, establishing resilience across various institutions. Another scheme already mentioned
is the 100 Resilient Cities initiative, which involves 19 cities in the region and aims to help them
become more resilient to the physical, social and economic challenges of this century.\textsuperscript{179} The
following are some examples. In Indonesia, most provinces have adopted Disaster Management
Plans (DMPs), while at district/city level 30% — equivalent to 118 cities — have adopted DMPs.
However, more effort is needed to ingrain disaster preparedness into people’s way of life.\textsuperscript{180} In the
Philippines, a large majority of LRGs in nine regions (over 17) have incorporated disaster risk reduction
(DRR) strategies into their local plans, albeit the capacity to implement them remains limited.\textsuperscript{181}
Illoilo is considered a DRR champion: after the typhoon in 2008, the city created a City Disaster
Risk Reduction Management Council (CDRMC) and developed a disaster plan involving barangays
(villages), setting up a disaster information centre and installing electronic signboards and bulletin
boards.\textsuperscript{182} Another project acknowledged by the UN SDG Platform is the Metro Colombo Urban
Development Project, developed in 2012 to reduce the physical and socio-economic impacts of
flooding and strengthen strategic planning processes.\textsuperscript{183} In India, Surat is frequently mentioned
as a good example; here, the city has developed an End-to-End Early Warning System.\textsuperscript{184}

**Sustainable local infrastructures**

**Water and Sanitation.** Although the region has
made significant progress in terms of access to safe drinking water, progress with sanitation has
been much slower. 300 million people still lack access to safe drinking water but 1.5 billion do not
have access to sanitation.\textsuperscript{185} Following a UNESCAP assessment regarding Goal 6 (water and sanitation),
the ASPAC region is expected to miss the Goal’s targets and, in fact, will be in a worse position by 2030 than it was in 2000. Rapid urbanization is challenging the ability of local governments to keep up with rapidly growing demands on their freshwater supplies. In many cities, access to water is limited both in terms of time and quality. Cities also face vulnerabilities due to outdated water supply systems and inadequate capture and storage capacity. In addition to limited access to sanitation that affects urban areas, a considerable proportion of wastewater already collected in the region is not treated before being discharged or reused (80% — 90% is discharged into water bodies in developing countries as of 2015). While a central government agency is generally charged with the management and protection of water resources, LRGs are primarily responsible for water supply. The service is often delivered directly by state/provinces or municipalities (operation and maintenance) or through special purpose authorities, especially in big urban areas (public corporations or utilities), with some involvement of the private sector through PPPs (e.g. Manila Water Company). Community-managed alternatives are also common in small towns and rural areas. Some utilities, such as Melbourne’s Victorian Water Corporation (Australia) has used SDG 6 and other SDG targets to develop its 2030 Management Strategy in consultation with stakeholders and customers, to ensure improved community wellbeing and a better natural environment. Many big cities are at the forefront of water management technologies in the region (e.g. NEWater in Singapore and Arisu - Office of Waterworks in Seoul).

Localized solutions to wastewater treatment, such as decentralized wastewater treatment systems, are emerging at the technical and policy levels in South and South-eastern Asia. For example, Rajkot (India) developed a decentralized wastewater treatment system in 2015. The system treats sewage from 236 households, saving 4,000 kWh of electricity (SDG 7) and reducing 15 tonnes of carbon dioxide equivalent per year (SDG 11.6). Coimbatore in southern India (1 million inhabitants) is currently working on a concept for intelligent water management to develop localized innovative water supply and wastewater disposal technologies. Community-led total sanitation initiatives have been developed in the past decade in India, for example, supported by national programmes (e.g. the Swachh Bharat Abhiyan initiative). Xiangyang City in Hubei Province (China) is testing out technologies for recycling sludge from wastewater treatment into energy, and recovering resources through an innovative cost effective green treatment process. Based on Mauri tradition, the City of Rotorua (New Zealand) has developed an ecosystem re-entry mechanism, including restoration of the mauri (life-force) of the wai (water), as well as Kaitiakitanga (care of the environment), to support the principle that water is intrinsic to life and therefore also needs to sustain life and be life-sustaining.

Only a few basin management systems are in place, such as in the Mekong River Basin and the Aral Sea Basin, although these need to be scaled up to ensure efficiency of water resource use and management. Improved watershed management requires more involvement and contribution from LRGs. Asia-Pacific developing countries need an additional USD 14 billion annually to provide universal access to water and sanitation by 2030. And in South and South-western Asia, sanitation facilities account for 56% of the total financing needs of the water and sanitation sector, compared to 44% for access to water-related infrastructure. In urban areas, improving the management of tariffs, fixing leakages and regular maintenance can help reduce financing needs.

Solid waste management and the circular economy. Cities in the region are also generating increasing volumes of solid waste. SDGs 11.6 and 12.3-5 focus on the treatment and recycling of waste, with a view to developing a circular economy. Poor management and disposal of waste has an impact on many other SDGs related to soil, groundwater and marine pollution, as well as a healthy environment. A number of cities have adopted comprehensive waste management strategies based on the 3R principles (reduce, reuse and recycle — SDG 12.5). Surabaya (Indonesia, 3.3 million inhabitants) developed an e-3Rs and created a waste bank where residents are paid in return for recycling plastic bottles and cups. The city also has an educational programme and community-based waste management in order to reduce the levels of waste and increase recycling in the city. In Chennai (India), two municipalities signed a plastic waste recovery agreement in July 2018 with a cement plant to recover plastic waste sorted by residents in order to limit the amount of plastic sent to landfill. Residents are also being asked to sort organic waste in order to adopt vermi-composting, and biogas equipment is going to be installed. Bandung City’s Low-Carbon Plan (2014) includes reducing waste going to landfill from 69% to 25% between 2013 and 2019 and promoting the 3Rs and waste-to-energy schemes. In 2010 Bangkok initiated a solid waste separation programme at community level and built a waste-to-energy plant operating in the Nongkhem District (generating 8MW of power), but this only accounts for about 3% of the total solid waste generated.

Other initiatives in medium-sized cities, small towns and villages are being promoted by different partners (e.g. in Quy Nhơn, Viet Nam).
Nam and Battambang, Cambodia). Innovative initiatives in the region have received international attention. For example, Wuhan (China, 10.9 million inhabitants) received the Guangzhou International Award for Innovation for the transformation of one of the largest landfills in Asia into a recreational park and ecological garden covering an area of over 170 square km. The project involved the transformation of one of the largest landfills in Asia into a recreational park and ecological garden covering an area of over 170 square km. The project involved governments and local communities as well as experts from 82 cities. This is the largest application of aerobic technology for landfill remediation and the biggest ecological bridge in China. Seoul has made significant progress in solid waste management in a relatively short period of time. It has reduced the waste sent to Sudokwon Landfill (where methane gas is captured and converted into energy, while organic food waste goes through composting), switched to incineration facilities (recovering enough energy to supply 800,000 households), created four resource recovery centres, and increased the rate of household waste recycling to 65% (almost twice the OECD average). As a result of this policy, Seoul has been able to achieve a 57% reduction in waste generated per capita and increased recycling rates nearly 20-fold. Partnerships between waste pickers and local governments can also be seen in the Global South (Dhaka, Jakarta and Manila). These informal solid waste collection systems gather recyclables separately and then give them to waste pickers in sorting centres. The Kapiti Coast near Wellington KCDC (New Zealand) redistributes waste levy fees paid by waste disposal operators to community groups, businesses, Maori and other community organizations in the form of Waste Minimization Grants, reducing waste going to landfill and the associated greenhouse gas emissions. However, the reality is that most cities struggle to manage solid waste in a cost-effective and environmentally responsible way, mainly relying on open dumping and uncontrolled landfiling.

Transport and mobility. Fast urban growth has led to a dramatic increase in motorized vehicles, severe congestion and air pollution. Careful planning of public transport, inter-modal transfer centres and innovative solutions for traffic management are necessary to make the ASPAC region’s transport systems more sustainable and accessible, decarbonize transportation and improve the air quality in urban areas. Examples of more sustainable and integrated public transport networks, electric vehicles and use of smart transport systems include innovative initiatives by LRGs in support of localizing SDG 11.2 and the New Urban Agenda.

Several key urban areas have adopted a mass transit-oriented policy with the aim of reducing private car dominance and improving the share of public transport modalities (subways, light trains and buses) and integrated fare systems. Cities such as Hong Kong, Seoul and Tokyo have among the more advanced and innovative systems. Hong Kong has invested heavily in a passenger rail and metro network, implementing restrictive car ownership and use policies, while the Mass Transit Railway Corporation operates a unique business model to capture property added value to invest in transport. As a result, public transport is used for 90% of all motorized journeys and the car ownership rate is lower than that of other cities of similar wealth. These transport patterns have resulted in very low transport-related energy use and carbon emissions.

Other metro areas, such as the Bangkok Metropolitan Region (BMR), are making strides to decarbonize the transport sector (including an elevated rail system, underground train network and an airport rail link), as well as extending the Pun-Pun, the city’s first bicycle-sharing programme. Bandung City launched its Better Urban Mobility 2031 plan to develop public transport, including a seven-line Light Rail Transit (LRT) system, as well as low-emission vehicles. Kochi City (India) commissioned the development of a new metro in 2017.

Inspired by the success of Bus Rapid Transit (BRT) in Bogota (Colombia), Transjakarta and Seoul BRT systems started operating in 2000, and Islamabad BRT in 2012. Now BRT is currently serving around 10 million people per day in Asian cities, half of whom are in China. Hanoi’s first BRT was launched in 2016. The city’s ‘Masterplan for 2030 with a vision to 2050’ envisages eight urban rail corridors, eight BRTs and several monorail corridors, with an increase in the modal share of public transport to reach 35% - 45% by 2030 and a 30% reduction in private transport in the same time period.

Other cities are moving towards electrification of the bus network. By the end of 2017, all of Shenzhen’s bus fleet — 16,359 vehicles — had been replaced with electric buses. This is the world’s first city to adopt a completely electric fleet of buses, leading to a reduction in the city’s emissions of 1.35 million tons of CO2 each year.

Soft mobility is also being promoted in the...
In 2014, people living in poor quality housing were estimated to number around 440 million, representing close to 27% of the total urban population in the region.

Inclusive cities and territories (a people-centred agenda)

Cities are considered engines of economic growth, leading the way in education and science, technology and innovation. But they are also home to widening inequalities. Poor people living in urban areas remain marginalized despite recent growth, youth unemployment is high and migrants are often greatly disadvantaged with respect to their rights. Urban population growth in the region has not been matched by growth in housing units or equitable access to land, resulting in housing shortages and the persistence and growth of slums.209

Adequate and affordable housing, neighbourhood upgrading. Access to affordable housing is one of the biggest challenges facing this region, home to the world’s largest concentration of urban slum populations. In 2014, people living in poor quality housing were estimated to number around 440 million, representing close to 27% of the total urban population in the region.210 Although the proportion of people living in slums is decreasing in all sub-regions, the absolute number is increasing in many cities. Right to shelter and tenure is a basic human right; and one of the key challenges is how to build inclusive cities that avoid marginalization, fragmentation and urban segregation.

Decentralization would increase the role of local governments in housing policies, but in many cases housing policy has been recentralized. In the Philippines, for example, the Urban Development and Housing Act which in the past gave local governments responsibility for providing housing has been hampered by their lack of control over land, as well as insufficient funds.211 China is an interesting exception, because here local governments are able to develop housing alternatives. More importantly, they are able to interact with their local communities and other local stakeholders to negotiate a more equitable and sustained city development strategy, where housing for the poor is a key element. They can also develop more gender sensitive approaches, by facilitating engagement by women in community planning and initiatives.

One of the more successful examples of a collaborative approach for slum upgrading is the Baan Mankong programme in Thailand. Implemented by the national Community Organizations Development Institute (CODI), in close collaboration with community organizations and with the support of local governments, the programme has provided secure land and housing to two thirds of the country’s urban poor over the past decade. The institutionalized participation of informal communities in the development of the urban fabric has renewed the city’s policy practices and the authorities’ vision of the future of the metropolis.212

In the Philippines, since 2008 the Iloilo Local Housing Board has facilitated coordination between local government and the urban poor federation to participate in the city’s formal planning process, disaster rehabilitation and relocation strategies that operate at the city-wide scale.213 The Prevention and Improving the Quality of Urban Slums in Tanjung Pinang (Indonesia), the Cross Cutting Agra Programme (India),215 and the Citywide Settlement Upgrading and Prevention Strategy in Port Moresby (Papua New Guinea)216 are among many other examples.217

Cities are supporting programmes for low-income populations and sponsoring affordable housing to protect inhabitants from evictions.218 The Seoul Type Housing Voucher Programme (redefined in 2013) provides a subsidy for low-income citizens as well as other options through their Public Lease Housing Policy.219 However, many national and local governments still refuse to acknowledge urban populations living in slums, keeping these inhabitants ‘off the radar’ and unregistered in official databases. The growing urgency to provide adequate, affordable housing to millions of households calls for a paradigm shift in housing policy and practice, in order to guarantee a sustainable future for cities.220 Experience suggests that, without comprehensive
public localized interventions and community involvement, private housing expenditure alone will not solve the slum problem in developing countries.221

Safe and Creative Cities. Urbanization has been associated with increasing prosperity, but also with unhealthy environments, insecurity and violence that frequently affects more vulnerable groups. Local governments in the region are acting to create fair, safe and liveable environments for all, particularly for women, children and the elderly, as well as minorities and the marginalized. A human rights-based approach contributes to more peaceful and inclusive societies.

Different modalities of gender-sensitive public policies and services, including safer and green spaces, are emerging to reduce discrimination against women and support gender parity (SDG 5 and 16). Logan City Council in Queensland, Australia has introduced a Safe City Strategy and Action Plan 2016-2020.222 Seoul's Crime Prevention through Environmental Design Project (CPTED) targets troubled neighbourhoods, with the involvement of communities, schools, the private sector, police and district offices in an effort to seek innovative ways to tackle crime.223 Other cities have adopted different policies through specific regulations to protect women's rights and avoid harassment and violence, e.g. Guangzhou, Seoul (Ordinance on Gender Equality), Faisalabad (Punjab Protection of Women Against Violence Act 2016), and Kathmandu (Public Transport Code of Conduct 2010). Beyond legislation, Busan has committed specific funds to prevent sexual violence. Hyderabad (India) is one of eight cities in India to participate in the Home Ministry's safe city plan to end sexual harassment. Bhopal has improved transport access and safety for women. Guangzhou, Kuala Lumpur, Zhengzhou, Shenzhen, Kolkata, Delhi and Hyderabad have created women-only spaces on public transport.224 In Ho-Chi-Minh City, the HCM Safe City programme adapted the National Thematic Project on Gender-Based Violence Prevention and Response (2016-2020).225 Many other cities have launched awareness campaigns and have hotlines, mobile apps or SMS to facilitate the reporting of sexual assaults. In Indonesia, Women's Schools (Sekolah Perempuan) have been established to provide informal education to empower women, jointly implemented by local governments, CSOs and communities in 54 villages and towns in different districts and provinces.226 Several Indian states have implemented specific schemes aimed at empowering the most vulnerable tribal groups or castes (Bihar, Jharkhand, Odisha and Telangana). Moreover, Kerala became the first Indian state to introduce a policy for transgender people.227

Local governments are also developing different modalities, such as participatory planning and budgeting, to boost civil society participation in local decision-making, as set out in SDG 16.7 (e.g. Vinh City in Viet Nam; Solo in Indonesia; Hwaseong in South Korea; and Seberang Perai in Malaysia).228 In the Philippines, the Grassroots Participatory Budget programme (formerly Bottom-up Budgeting) succeeded in the mid-2010s in expanding to virtually all local government units (1,633 in total, in 2015).229 Chengdu (China) has been practising participatory budgeting since 2008, and has funded over 100,000 projects. Participatory budgeting is a powerful tool to meet the SDG imperative to 'leave no one behind' by involving migrant workers (e.g. Taoyuan)230 and persons with disabilities (e.g. Sanxia district).

Cities are also taking advantage of cultural policies and people’s initiatives to boost inclusion, creativity and to celebrate diversity. As part of its heritage, Pekalongan (Indonesia) recognizes itself as the ‘City of Batik’ a sector in which 60% of the workers are women.231 Kanazawa (Japan) has fostered synergies between local artisans and other creative areas, combining tradition, innovation and new technologies.232 The province of Jeju (South Korea) has committed to preserving the custom of haenyeo (women divers) as an eco-friendly sustainable fishing practice, rooted in traditional knowledge.233

Inspired by the spirit of the Asia Human Rights Charter,234 local governments such as Gwangju (South Korea) have carried out extensive memorial and human rights education programmes with a view to promoting peace, culture and human rights in both the city and its regions.235 Others, such as the Regency of Wonosobo and Palu City (Indonesia) have created city human rights commissions to protect religious diversity, minority groups and develop awareness-raising programmes.236

This section has highlighted a range of innovative programmes, schemes and experiences increasingly being tested and implemented in the ASPAC region. Other important aspects are also worth exploring such as energy transition, local food systems, urban agriculture, open government and new technologies etc. Most of these programmes are concentrated in frontrunner cities, mostly large urban areas, and are managed by innovative local leaders often supported by an exchange of experiences between international networks and partnerships. To move to the next phase and transform urban patterns of development in the ASPAC region, it will be necessary to refine and scale up these emerging local approaches. This will require more collaborative policies between local, national and international institutions and actors and a significant increase in resources available at sub-national levels.
04. Conclusions and policy recommendations: the state of SDG localization in Asia-Pacific

As stressed in the UNESCAP Report 2019, far-reaching initiatives and reforms are needed in the ASPAC region to transform the current trajectory which, if unchanged, will not allow the region to achieve all the Sustainable Development Goals by 2030. To reverse these trends, the same report calls for accelerated efforts, the adoption of coherent and integrated policies that look at the interlinkages between the Goals, as well as good governance and appropriate and effective investments to lead countries to a truly sustainable future.

Local and regional government actions can accelerate SDG implementation

This publication has highlighted where LRGs stand in this process. It offers a brief but general overview of initiatives on the ground, in cities, provinces and municipalities and in different countries. It shows some of the progress and gaps at sub-national levels, as well as the decisive role played by local authorities, national associations and regional networks of LRGs to support territorial strategies for the localization of the SDGs and other global agendas (climate change, DRR, New Urban Agenda). These networks ensure regional dissemination and knowledge-sharing, peer to peer exchange and a significant advocacy role with regards to national and regional institutions, as well as alliances with CSOs, academia, and the private sector. They are important players in the expansion of the localization movement.

At the same time, the report highlights a multitude of initiatives in cities, regions and provinces that are promoting sustainable change, although they are not necessarily ‘labelled’ as SDGs. Most tend to be more project-oriented, but could provide the foundations for integrated territorial approaches to climate change, DRR, access to basic services and housing, gender equality, public mass transport, smarter cities, and circular economies. Many initiatives are putting people at the centre, enhancing opportunities for institutions and stakeholders to interact and find synergies.

These actions have enormous transformative potential, although there is still a way to go in terms of scaling up and addressing systemic flaws, in the spirit of the 2030 Agenda. But they pave the way. More local governments in the ASPAC region will have to rely on collaboration with civil society and horizontal coordination between territories — networks, partnerships and the exchange of resources and knowledge — in order to realize the ‘quantum leap’ needed to make implementation of the SDGs a reality in the region. The mainstreaming and upscaling of local actions through integrated territorial approaches will be important accelerators to meet the 2030 targets and catalyse governance transformations.

However, as the previous sections underlined, the potentialities of LRGs’ contribution to the SDGs have not always been clearly acknowledged. Only 11 ASPAC countries (out of 28 that reported between 2016 and 2019) involved LRGs in the preparation of the VNRS and only four countries involved them in the national coordination mechanisms (Australia, Indonesia, Japan, and New Zealand) (see Sections 2.1 and 2.2). The limited involvement of LRGs in these processes...
constrains their mobilization and hinders multilevel dialogue to foster coordination and collaboration. There is much to do in terms of involving LRGs in the VNRS and in the national coordination mechanisms in order that decisive steps can be taken towards localization of the 2030 Agenda. At regional level, the systematic participation of LRGs in UNESCAP’s annual Regional Forum on Sustainable Development and in the ASEAN Mayors Forum – in which UCLG ASPAC serves as its Secretariat – has contributed to stronger SNG representation and multilevel governance.

Next steps

Based on these findings, representatives of local government associations of several countries in the region, national governments and international institutions gathered at the Siem Reap Workshop, co-organized by UCLG jointly with UCLG ASPAC, LOGIN Asia, Development Partners Network on Decentralization and Local Governance (DeLoG) and the ADB (8-9 April 2019), to discuss the three main reforms needed to underpin the localization of the SDGs: 1) governance reforms, 2) financing reforms and, 3) public management reforms. These reforms can easily be linked to the policy proposals defined by UNESCAP in its analysis of the links between urbanization and the 2030 Agenda.239

Governance reforms

Renewed governance policies are needed that recognize the multiple benefits of interlinkages between urbanization, territorial strategies and the SDGs. There is a need to think strategically about localization, territorial and urban development across a range of diverse city sizes (small, medium and large), as well as across the different levels of territorial governance. Synergies between the New Urban Agenda, the SDGs and national development strategies need to be strengthened. Coordination efforts can also be explored for the Nationally Determined Contributions (NDC) agreed at the COP 21 in Paris on climate change that countries need to submit or update in 2020. A common approach is needed to build synergies, tackle sectoral fragmented approaches and improve the allocation of resources between public administrations.

Effective decentralization policies are also central to underpin governance efforts, empower LRGs and support SDG localization through strong territorial development strategies. Although decentralization is not a panacea per se and countries show divergent progress and experiences in the region, this report shows clear differences between empowered LRGs and LRGs with less enabling environments (see Section 2.2). The former, particularly when they are led by a visionary local leader, play an active role, develop bottom-up initiatives, mobilize local actors and resources involving the whole potentiality of a territory, and are committed partners for the achievement of the SDGs. On the other hand, when LRGs operate with more constrained powers and weak capacities and resources, their contribution is limited and they play a more passive role. As shown above (see section 2.3), the lack of clarity about local governments’ legal mandates and areas of jurisdiction in some countries needs to be addressed through proper assignment of functions between levels of government.

Vertical and horizontal coordination remains a great challenge and requires governance reforms to foster multilevel dialogue and cooperation. Horizontal cooperation at sub-national level is also critical to foster territorial development strategies and strengthen the management of growing metropolitan areas, megacities and urban corridors, as well as for key environmental issues such as river catchments (e.g. the Ganges river catchment). The scale of the challenge and the means needed to tackle them are enormous.

Financing reforms

As mentioned in the introduction, the UNESCAP Report 2019 concludes that achieving the SDGs by 2030 would require an annual additional investment of USD 1.5 trillion for ASPAC developing countries.240 This includes a range of urban and territorial infrastructure investments across multiple sectors.241

Countries in the region are adopting reforms and introducing initiatives to support local investment in services and infrastructures. Certainly there are great contrasts between high-income countries, with cities and regions that have access to well-developed capital markets and adequate instruments to finance urban infrastructures and, at the other end, low-income countries, with cities and territories showing low revenues, low creditworthiness and difficulty attracting banks and investors. Emerging countries show different landscapes. International support will continue to be crucial for less economically developed countries, land-locked developing countries and Small Island Developing States. Further consideration is needed as to how to

When adequately empowered and led by a visionary local leader, LRGs play an active role in mobilizing local actors and partners for the accomplishment of the SDGs.
respond to the different regional contexts, and to large, medium and small cities and their capacity to access resources.\textsuperscript{242}

In summary, reforms are needed to tackle urban and regional infrastructure gaps and improve capacity at the sub-national level to mobilize financing to respond to the SDGs. \textit{Investment flows can be enhanced where national and local authorities clearly articulate strategies for sustainable urban and territorial development.} Applying an incremental approach to developing empowering and progressive local tax systems and receiving a better share of national fiscal revenues (rationalize intergovernmental flows) is needed to boost resource mobilization efforts in the region. Asia-Pacific economies have boomed over the last decades, but many rapidly growing cities have failed to capture this and continue to accumulate infrastructure deficits (see Section 2.2). Enhanced local government resources needed — including land value capture and sound urban and territorial assets management — that can act as levers to attract different sources of finances. However, fiscal strategies will not necessarily mobilize resources at sufficient scale.

\textbf{There is a need to tackle inadequate borrowing frameworks and regulations to facilitate LRG loans and access to markets.} The sources and mechanisms of credit for LRGs vary considerably across countries. Stronger partnerships between central and local governments (with help from local and international finance) can help multiply sources of financing and develop innovative financial instruments to redirect funds to sustainable development projects: moving from more traditional municipal funds and banks to newer ‘green’ funds and investment tools that merge domestic and international funds.\textsuperscript{243} Some national governments are launching new initiatives — such as ‘SDG Indonesia One Platform,’ — to mobilize funds from different sources (private sector, philanthropic and religious funds).\textsuperscript{244} At the international level,
the Asian Infrastructure Investment Bank (AIIB), the BRICS New Development Bank, and multilateral climate funds are increasingly a source of infrastructure financing in emerging economies. To scale investment, national and local governments require strategic, far-sighted reforms and coordinated action that recognizes those policy inter-relationships likely to have the greatest and most sustainable impact.

Policy coherence and national planning systems
The governance reforms that are needed to develop policy coherence, improve coordination among different levels of government and support territorial development strategies implies a progressive evolution of management traditions within and between institutions. This is particularly sensitive with regards to the national planning systems that many countries look to as a way of localizing the SDGs.

Several countries have developed robust policies to foster national and local coordination; improve the capability of sub-national levels to lead development processes; develop training initiatives; and explore new financing mechanisms to promote vertical and horizontal cooperation. Other countries, on the other hand, even though they acknowledge the need to embed the SDGs into local processes, have not yet defined clear territorialization strategies nor have they followed a ‘trickle-down’ approach to galvanize the local effect of national policy. They often lack the necessary frameworks, technical assistance and incentives to support local buy-and territorial development approaches. Inevitably, those countries in the first group have recorded faster progress, although even they are experiencing difficulties and still require improvements in territorial approaches and sub-national coordination. There are still different planning approaches that co-exist, widening the mismatch between plans and budgets, the inconsistency among indicators and the availability of data — let alone the differences in political orientation. In order to accelerate action and scale up the impact of policy on sustainable development, a territorialized strategy will be necessary.

Fragmented reporting systems hinder ownership and institutionalization of the SDGs across different levels of government. Strengthening local reporting capacities and closing the data gap will need particular attention and support. National and local capacities to define and collect disaggregated and localized data should be part of territorialization strategies, to ensure that planning processes at all levels are founded on realistic targets and that effective implementation can be monitored.

One of the most important imperatives in the localization of the SDGs is to promote adequate integration of policies and strategies via improved and effective coordination mechanisms. In countries with complex geography, diversity and multiple layers of government — many of them engaged in the decentralization process — implementation of the SDGs needs to focus on integrated planning mechanisms, better resource management and monitoring efforts between national and sub-national governments. In decentralized countries, the principle of subsidiarity should be at the heart of the relationship between different institutional tiers in order to address the structural problems of power-sharing imbalances, capacity gaps and financing shortages.

Addressing the main challenges of localization requires compliance with the 2030 Agenda’s call for a holistic approach to development. This can result in enhanced policy coherence (SDG 17.14) and greater stakeholder involvement at all levels. Limited consultation and uncoordinated decision-making have traditionally pervaded the governance systems of many ASPAC countries. LRGs must call for better consultation, and the power to set priorities and determine the plays in resource sharing if they want to truly localize implementation.

The ASPAC region’s inherent complexity, size and diversity have made progress on localization uneven throughout the region. The challenges that impact these countries are massive and diverse; the range and complexity of multi-layered levels of governance, plans, strategies and institutions vary so much across the region that it is impossible to define one standard roadmap where ‘one size fits all.’ However, new governance frameworks, adequate resource mobilization and more effective management to catalyse territorial development are all urgently needed to boost SDG implementation, mainstream local experiences, and further engage LRGs and communities in the achievement of the 2030 Agenda, thus helping to reverse the current trajectory and accelerate the region’s transition to a sustainable future.
05. Policy recommendations at the global level
Our roadmap to accelerate the achievement of the 2030 Agenda through the localization of the SDGs

The transformation that needs to be brought about to achieve the global agendas will only occur if our development model responds to the dreams and expectations of communities, and if there is collective responsibility to make the necessary adjustments and sacrifices to achieve more equitable, fair and sustainable societies.

The global agendas must either be local or they simply will not be. The constituency of local and regional governments (LRGs) has a critical role to play to catalyse change and provide the kind of service delivery that will deliver inclusion, efficient use of resources and sustainability. This LRG constituency shares the sense of urgency to scale-up and accelerate such a transformation.

The findings of the GOLD V Report have inspired policy recommendations that build upon the ‘Bogota Commitment and Action Agenda’, adopted by the World Organization of United Cities and Local Governments (UCLG) in 2016, as well as the annual reports of the Global Taskforce of Local and Regional Governments (GTF) to the UN High-Level Political Forum on Sustainable Development (HLPF) since 2017.

In a context of increasing inequalities, endangerment of ecosystems and tensions that are threatening human solidarity, the GOLD V Report presents the efforts of a key constituency that serves communities, responding to their needs and hopes. It is a positive message about the impact that well-resourced localization can have in a new vision for the sustainability of our planet. The recommendations are addressed to local and regional leaders and their organizations, to our partners, national governments, international organizations, civil society and social actors, as well as to the business sector.

Local and regional governments lead the way towards a more equal and sustainable world

In the globalized urbanization era, the actions of cities and LRGs are integral to the global agendas: it is at the local level that the interrelationship between the different agendas most clearly manifests itself. With regard to the global agendas, getting the 2030 Agenda commitments right necessitates the full implementation of the principles of the New Urban Agenda and the Addis Ababa Action Agenda, that in turn are fundamental to changing the patterns of production and consumption as the basic premise of the Paris Agreement on climate change and the Sendai Framework for Disaster Risk Reduction. The following recommendations situate the LRGs as drivers of an alternative territorial approach to local development (TALD).
Galvanize forces for the localization of the 2030 Agenda in our cities and territories

LRGs and their global and regional organizations have pioneered the localization of the SDGs. To make the ‘quantum leap’ currently needed they must:

• Adopt the SDGs as a reference framework for LRGs’ policies, programming, planning and budgets, ensuring a coherent and integrated approach — mindful of the Paris Agreement on climate change, the Sendai Framework and empowered by the principles of the New Urban Agenda.

• Embolden ambitions by fostering greater ownership of the communities and attain real local buy-in of policies. Co-creation with other local stakeholders will be critical in the definition, implementation and assessment of the localization process.

• Share and learn: participate in LRG networks and invest in peer-to-peer knowledge-sharing, practice exchange and training. Fostering and accessing technical assistance and decentralized cooperation to promote the localization of the SDGs will be key.

• Link with science: serve as catalyst to foster partnerships with research institutions and promote ‘labs’ to experiment with innovative ways to implement, review and follow-up the localization process.

Foster an ecological and systemic relationship between people and nature. LRGs must support cohesion of the ‘urban-rural continuum’ and strengthen the interconnected policies that halt deforestation and desertification; effectively manage the current network of protected areas, including terrestrial, freshwater (both surface and ground) and marine areas; and improve human wellbeing, particularly of indigenous populations and communities whose livelihoods depend on forests, water and soil conservation and climate change mitigation.

Achieve climate neutrality in cities and territories, taking into account the life-long cycle of GHG emissions to proactively tackle the climate emergency. Decoupling socio-economic development from environmental degradation calls for well-planned urban development and land management, responsible and fair management of natural resources and waste, and ensuring the reduction of inequalities. It implies divesting from fossil fuels to free up resources. These can in turn be invested to accelerate scaling-up the protection of most vulnerable populations and ecosystems, and offsetting any emissions that cannot be further reduced or avoided.

Contribute to holding global warming to 1.5°C by the end of the 21st century, through the collective definition of Territorially-Determined Contributions (TDCs) feeding into the Nationally-Determined Contributions (NDCs) for the implementation of the provisions of the Paris Agreement. Support the post-2020 negotiation of the global biodiversity framework, as well as the Convention on Wetlands of International Importance and the Convention on International Trade in Endangered Species of Wild Fauna and Flora.

Promote peace and city diplomacy by tackling the roots of local violence, educating for its eradication and to create a mindset that makes it possible to build a culture of dialogue in cities and territories. Foster cities and territories as spaces for co-existence and peace through measures that fight interpersonal violence, extremism, racism, xenophobia, gender-based violence and other forms of intolerance, and introduce measures to integrate all citizens.

Promote culture as the fourth pillar of development and as a core component of local identity, a strand of global solidarity, and a vector for peace and human rights. Foster locally relevant cultural policies and programmes on memory, heritage, creativity, diversity and knowledge, as intrinsic to local sustainable development.

Protect the commons, human rights and culture as foundations of peace

The preservation of the global commons (biodiversity, land, atmosphere, oceans) that determine the survival of all living beings, as well as the protection of peace, cultural diversity and human rights, require strong local action and LRGs’ commitment to:
Put human rights and the ‘Right to the City’ at the core of the local agendas – strengthen inclusive local policies to ‘leave no one behind’

Given its multiple dimensions, the eradication of extreme poverty is inextricably linked to the protection of human rights. LRGs should put the ‘Right to the City’ at the centre of urban and territorial governance to ensure universal access to quality basic services, nutritious food, health and education, economic opportunities, access to adequate housing and disaster risk prevention for the most vulnerable. These are essential components of territorialized pro-poor policies. Partnerships with communities and community-based organisations are instrumental in creating alternative solutions, particularly where public services are scarce. LRGs should commit to:

• Remove any discriminatory legal and social policy at the local level to ensure equal opportunities for all, particularly for women, indigenous peoples and ethnic minorities, the LGBTQIA+ populations, the elderly, the youth, and people with mental and physical disabilities. Facilitate migrants’ and refugees’ access to rights and services, regardless of their status.

• Tackle gender-based discrimination and violence with tailored policies, budgets and legal reforms. LRGs can raise awareness and reinforce education on the changing conception of gender roles. Women must be equally represented and granted equal powers in decision-making forums. It is necessary to enact gender-sensitive policies in territories that promote equal access to health and education and acknowledge the role of women in the domestic and informal economy. Gender equality has a multiplier effect in advancing sustainable development, environmental protection and social justice.

• Support the fulfilment of the right to adequate housing for all, which includes affordability, legal security of tenure, habitability, accessibility and cultural adequacy standards, and must be understood within the framework of the ‘Right to the City.’ Promote inclusionary housing policies and slum upgrading initiatives that are undertaken in partnership with the communities and seek to avoid forced evictions.

• Promote the Principles of Open Government as a tool for the improvement of policy ownership and accountability. Create spaces and mechanisms that favour citizen participation in local decision-making, access to information and communities’ ownership of the 2030 Agenda and other global agendas.

Harness the co-creation of cities and territories through sustainable participative urban and land planning

Planning needs to be the result of the political, economic and social systems within which it is embedded. Deep reforms on planning regulations and frameworks are a critical part of SDG localization and the New Urban Agenda. This includes the need to produce qualified professional planners and researchers. By renewing participatory urban and spatial planning, LRGs should:

• Adopt an integrated planning approach, as reflected in the New Urban Agenda, to strengthen the inclusive dimension of cities, climate adaptation and mitigation and disaster risk prevention strategies, and multiply the benefits of interlinkages between urban and territorial areas. Inclusive and participatory planning are key levers for the co-creation of sustainable and inclusive cities and territories.

• Build capacities and retain local expertise to address rapid urbanization with adapted approaches to reduce urban sprawl and avoid costlier retrofitting. Most urgent actions are needed in regions where rapid urban growth will be concentrated (Sub-Saharan Africa and South and South-East Asia).

• Scale-up efforts to build urban resilience and disaster risk preparation, involving local communities, particularly vulnerable groups, in particular in coastal cities and Small Developing Island States (SIDs).

• Contribute to promoting ‘polycentric’ urban development to reduce core-periphery divides, promote more compact and social-mix neighbourhoods, reduce inequalities and avoid urban segregation.

• Create or preserve open public spaces to boost inclusion and protect urban heritage and culture, while also pursuing innovative solutions to foster creativity for sustainable urban development.

• Curb urban sprawl, reduce distance between home and work places to reduce commuting times and encourage access to alternative and safe modes of mobility (including walkable cities) to reduce GHG emissions. Urban and
spatial planning can lead to transformative use of renewable energy, and reduce the ecological footprint of cities and territories, greening public infrastructure and spaces, reducing air and waste pollution, and reducing risks such as floods, drought or urban heat island effects.

- Improve relationships with the surrounding peri-urban and rural areas, avoid land degradation, and improve food security and farmers’ livelihoods.
- Enhance the management of natural protected areas and ecosystem services, such as upstream watershed areas that the city relies on for fresh water supply, and support reforestation.

**Improve access to sustainable and inclusive public services in cities and territories**

LRGs need to develop an integrated and systemic approach that will guarantee universal reach. This includes universal access to safe drinking water and sanitation, to quality education and health, to public affordable and sustainable mobility, to integrated waste management and to affordable and clean energy. LRGs need to:

- Develop infrastructure plans alongside urban land-use plans, including long-term investment strategies to guide economic and spatial expansion, especially where there are pressures for growth.
- Reduce the environmental impact of urban infrastructures and contribute to communities’ resilience.
- Support inter-municipal cooperation or specific mechanisms that guarantee collaborations to ensure full coverage and adequate quality delivery in territories, be it in metropolitan areas, cities or peri-urban areas, or between neighbouring municipalities in rural areas.
- Guarantee access to affordable services exploring new universal models of service co-production, taking advantage of new decentralized technologies; support small-scale businesses as basic service providers and improve the quality oversight of services; and gradually insert the informal economy into the organization of public service delivery.
- Improve the management, delivery and transparency of public basic services, and facilitate innovative partnerships for co-production and co-management.

**Focus on the future of jobs and local economic development (LED)**

It is now urgent to steer a course away from the patterns of economic growth, consumption and production of goods and services that perpetuate deprivations, generate inequalities, deplete the global commons and threaten to cause irreversible damage to the environment. LRGs should therefore:

- Promote LED that helps generate sustainable socio-economic development tailored to the particular needs and contexts of cities and territories, and ensure decent work and respect for responsible sustainability standards.
- Prioritize quality local employment as a right and tailor fully-fledged policies responsive to the barriers faced by and vulnerabilities of specific groups, including women, youth, ethnic and religious minorities or people with disabilities among others; likewise find inclusive solutions to involve migrants regardless of their status; and facilitate intergenerational knowledge transfers to preserve, disseminate and evolve local know-how and crafts.
- Create spaces for local innovation in order to nurture and scale-up local capacities, including those enabled by technology and nature-based industries; develop synergies with local initiatives; support small and medium-sized enterprises (SMEs) that contribute to sustainable growth and to create employment in their local environments, give impulse to productive clusters and cooperative strategies both within and between sectors and territories.
- Ensure that new technologies and e-platforms do not widen the divide that is consolidating poor-quality employment, or privilege extractive systems of production that do not support communities’ social cohesion, connectedness and wellbeing. Develop policies to protect people’s privacy, and foster traditional local small business.
- Promote alternative economic models such as the transition towards a circular and green economy; support the social and collaborative economy and sustainable tourism. Support the transition towards territorialized food systems that foster good health while minimizing environmental impact; and support efforts to reduce the environmental footprint.
- Recognize the critical role that the informal economy plays in the urban fabric. Because of this contribution and the growing number of
workers involved in informal economy activities (estimated at over two billion people worldwide, among which women are ‘over-represented’), LRGs need to take necessary steps and support and create initiatives to help entrepreneurs in the informal economy. This must support them to evolve their activities towards the social and solidarity economy, and promote the creation of mechanisms to facilitate access to social protection.

• Create enabling conditions, capacities and confidence to mobilize the transformative power of public procurement, while respecting the autonomy of LRGs to set their own policy priorities. This should be done by mainstreaming and implementing sustainable and decent work policies, and fair, labour-friendly and environmental clauses, and by encouraging a culture of transparent public contracts and disclosure.

At the global and national levels

Foster a global-local movement to localize the SDGs. Localization should be a pillar of national sustainable strategies to implement the SDGs

To achieve the 2030 agendas on time, the pace of change needs to accelerate and ambitions need to be bolder. National governments and international organizations should work in collaboration with LRGs and their networks to increase the outreach and strengthen partnerships of the ‘whole-of-government’ with the ’whole-of-society’ to boost localization. National governments should:

• Integrate (or strengthen) robust localization strategies in their sustainable development strategies and action plans to expand the involvement of LRGs and local actors, accelerating and upscaling territorial sustainable development. Localization strategies should be mainstreamed in all plans, programmes and budgets from national to local levels.

• Coordinated strategies for the 2030 Agenda, the SDGs, the Paris Agreement on climate change and the New Urban Agenda are an imperative. No single agenda can be addressed in isolation. National sustainable development plans (NSDPs), Nationally-Determined Contributions (NDCs) to the Paris Agreement and national urban policies (NUPs), as well as other strategic plans, need to be articulated in order to overcome sectoral fragmented strategies, improve the allocation of resources and boost implementation at all levels, from global to local and vice-versa.

Create an ‘enabling institutional environment’ for localization – empowered local and regional governments and adequate financing flows to support localization are an imperative

Effective decentralization policies are intrinsic to empowering LRGs and supporting SDG localization. The principles of effective decentralization are defined in the International Guidelines on Decentralization and the Strengthening of Local Authorities, adopted by the UN-Habitat Governing Council in 2007.

• LRGs need local autonomy and subsidiarity principles to be respected in order to respond to the demands of their inhabitants, to innovate and to adapt national policies and the SDGs to the local context. Urgent actions are needed to unlock LRGs’ potential to localize the SDGS and ensure access to basic services for all.

• Access to basic social services is a universal principle acknowledged by the UN and a building block for human development. LRGs need to be empowered and accountable to ensure the delivery of quality basic services for all, defined as direct or shared responsibilities in the legal frameworks of a majority of countries, to achieve the principle to ‘leave no one behind’ — one of the core objectives of the 2030 Agenda.

• LRGs’ adequate fiscal powers and capacities, as acknowledged by the Addis Ababa Action Agenda (paragraph 34) need strengthened local tax systems, including the power to capture part of land and property added-value; a better allocation of national fiscal revenues through fair, regular and predictable intergovernmental transfers; and access to responsible borrowing
to invest in sustainable public services and infrastructures. Environmental taxes should be considered to advance energy transition and enshrine the ‘polluter pays’ principle into financing frameworks. Equalization funds are also necessary to ensure the adequate redistribution of resources across the whole territory to avoid ‘leaving any territory behind,’ paying particular attention to intermediary cities and small towns and promoting more balanced and ‘polycentric’ urban systems.

- To mobilize national and international sustainable investments toward cities and territories, national policies and legal frameworks should be revised. An appropriate range of debt finance options needs to be adapted and made accessible to LRGs, one that considers multiple sources of financing and innovative financial instruments. It is also necessary to adopt vertically aligned NDC investment plans and open or facilitate LRGs’ access to climate and green funds.

- Facilities supporting cities in making transformative projects reach bankability and creditworthiness standards are essential and require strong backing and leadership to close financing gaps and enhance match-making opportunities, either through specific funds, or connecting cities with potential financiers. The next phase, already in motion, is to support a more diverse set of financial mechanisms that are adapted to the different capacities of cities and territories, such as the upcoming International Municipal Investment Fund, set up by the UN Capital Development Fund (UNCDF) and UCLG with the support of the Global Fund for Cities Development.

- The promise of ‘blended finance’ can only be fulfilled with the creation of adequate regulatory frameworks and with support for LRGs in setting up partnerships with the private sector. These must be mutually beneficial and have clear contractual parameters ensuring that the needs of their citizens come first and that the poor and vulnerable groups are not ‘left behind’.

---

**Effective involvement of all spheres of government, civil society and key stakeholders is imperative to strengthen the governance of the SDGs and the localization process**

Strong partnerships and the participation of LRGs, civil society, private sector, social partners and academia in SDG implementation, are critical to achieve the ‘whole-of-government’ and ‘whole-of-society’ approaches called for by the SDGs. It is also crucial to ensure policy and institutional coherence both internally and externally. Without the active and collaborative involvement of all stakeholders, the SDGs will remain aspirational goals only.

- At the national level, there is much to do in terms of effectively involving LRGs and stakeholders in the national coordination mechanisms for the implementation of the SDGs. Limited consultations and uncoordinated decision-making presently hinder the policy coherence necessary to achieve the SDG targets and reduce local ownership.

- Integrated national planning systems are at the core of functional multilevel governance systems and need to be revamped to enhance the coordination between national governments, LRGs and local stakeholders. A renewed approach to planning that articulates national strategies with strong local initiatives in active collaboration could recalibrate development policies, facilitate burgeoning local actions and promote institutional innovation. This collaboration needs to be founded on the respect of the principle of subsidiarity.

- As decision-makers, LRGs need to be involved in the definition, implementation and follow-up of NDCs and national strategies for the implementation of the New Urban Agenda. National urban policies (NUPs), adopted (or in the course of being adopted) by more than 92 countries, need to be integrated in national development strategies (NDSs) to take advantage of the cumulative benefits of urbanization and identify cross-sector synergies to support SDG implementation.

- Horizontal cooperation at the sub-national level (e.g. intra and inter-municipal cooperation) needs adequate governance mechanisms, tools and fiscal policies to foster urban-rural partnerships and reinforce the management of growing metropolitan areas. Coordination will also strengthen interconnections and cooperation between territories for service delivery and key environmental issues that require reinforced and trans-jurisdictional (and often trans-boundary) actions, such as the management of river catchments and environmental resources.
Support the production and dissemination of disaggregated data for monitoring, evaluation and impact measurement of the localization of the global agendas, including the SDGs

- LRG involvement in the global and national monitoring and reporting processes on SDG implementation is crucial and should not be limited to ad hoc consultations. The process of Voluntary National Reviews (VNRs) needs improvement, to ensure the fully-fledged participation of LRGs that brings the voice of the territories and local actors to the process.

- Fragmented reporting systems hinder ownership and the institutionalization of the SDGs across different spheres of government. Strengthening local reporting capacities and closing the data gap require particular attention and support. National and local capacities to define and collect disaggregated and localized data should be part of SDG localization strategies to ensure that planning processes at all levels are founded on realistic targets and that effective implementation can be monitored, as well as to ensure accountability and citizen follow-up.

- Voluntary Local Reviews (VLRs) contributing to national monitoring and to the global debate, and promoting knowledge-sharing and emulation between LRGs, are opportunities that need specific support and acknowledgment.

A global governance system that brings together local and regional governments and civil society will boost the implementation of the global agendas

- The UN High-Level Political Forum on Sustainable Development (HLPF) will need to be reshaped to enhance the participation of different stakeholders, as well as facilitate true innovation and learning. The HLPF should be an effective multilateral and multi-stakeholder space for dialogue, exchange and knowledge-sharing in order to reinforce multilateral collaboration and partnerships and ensure the real oversight of commitments, policy agreements and implementation.

- The consolidation of the Local and Regional Governments Forum is essential as a critical space for interactions between the LRGs, UN Member States, and the UN system. Furthermore, multilevel dialogues need to embolden the local-global leadership, as proposed in the ‘Seville Commitment.’

At the continental level, LRGs’ enhanced involvement in the regional forums (e.g. Regional Forums on Sustainable Development, co-organized by regional UN Commissions), in multi-stakeholder platforms (e.g. the European platform) and spaces (e.g. urban forums) will enhance policy exchange to foster SDG localization and the active involvement of LRGs in the monitoring of the SDGs and related agendas.
06. Notes and Bibliography
Background — Notes

Asia-Pacific region — Notes

1 GOLD V REGIONAL REPORT —— ASIA-PACIFIC

2 United Nations Secretary-General, “The Road to Dignity by 2030. Ending Poverty, Transforming All Lives and Protecting the Planet” (New York, 2014).

12 Australia, Bangladesh, Bhutan, Cambodia, China, Fiji, India, Indonesia, Japan, Kiribati, Korea (Republic of), Lao PDR, Malaysia, Moldova, Nauru, Nepal, New Zealand, Pakistan, Palau, Philippines, Samoa, Singapore, Sri Lanka, Thailand, Timor-Leste, Tonga, Vanuatu and Vietnam.

16 The mapping concluded that 94 targets were aligned with the mid-term development plan and 85 of the 319 national indicators were directly aligned with SDG indicators.

17 The government of New Zealand adopted a Living Standards Framework, which focuses on measuring and analysing the dynamics of inter-generational wellbeing along 12 dimensions.

20 UCLG and GTI, “Towards the Localization of the SDGs 2018,” UCLG and GTI, “Towards the Localization of the SDGs,” LRGs’ Report to the HLPF (Bangkok, 2018), Shom Teoh, “Early Views of ASEAN’s ‘Frontrunner Cities’ on the Sustainable Development Goals (SDGs) and Local Data Management” (Bangkok, 2018).

21 Countries where local governments participated to some extent in the consultation: Australia, Bhutan, Japan, Indonesia (although not through their associations), Kiribati, Nepal, New Zealand, Palau, Philippines, Timor-Leste, and Vanuatu. However, participation in some countries was limited (just one workshop held or a response to a survey). In the Philippines, the League of Cities participated in the National SDG conversation, albeit informally. It was not involved in the drafting and was not recognized as a stakeholder (UCLG Survey 2019). In South Korea, the City of Seoul did participate partially in the VNR process. In Pakistan, consultations were led by CSOs with involvement at the provincial level rather than district level. The Local Council Associations of Baluchistan, Sindh and Khyber Pakhtunkhwa reported not having participated in them (UCLG Surveys). In India, participation was limited to the state government. In Vietnam participation was limited to the presentation of the VNR once finalized. In Cambodia, the government provided guidelines to local governments to provide input for VNR 2019.

22 VNRs, Global Taskforce Surveys.

24 For previous decades, see GOLD I, II and III Reports.

25 The current project recognizes the 14 administrative regions. Provinces under a region could disappear. The governor of regions could be appointed, while regional councils could be elected. It also proposes amalgamating municipalities and abolishing villages. Local government organizations call to respect the current Local Governments Code.

27 For instance in the Philippines, education and health, agriculture and social services are still dependent on and answerable to national/regional offices (UCLG Survey 2019).

28 Vanuatu adopted the Decentralisation Act and the Decentralisation Policy 2017-2027. In Fiji, local administrations have been appointed since the 2006 military coup.

29 Lina Sonne and Anar Bhatt, “Local Economic Development in South Asia” (London, 2015). According to the 2014-2015 Index, Kerala, Sikkim, Karnataka, Maharashtra and Himachal Pradesh are the highest-ranking states in terms of effective devolution, while Jammu, Kashmir, Arunachal Pradesh, Manipur, Bihar and Jharkhand rank the lowest. While the Zila Parishad or District Councils have elected councillors, a president and a vice-president, their administrative systems are headed by a chief executive officer or district magistrate who is either an Indian administrative service officer or a state civil service officer.
Although the governance structure in Bangladesh is decentralized and there are local authorities with defined powers and duties, the centre oversees all the activities carried out by local authorities right down to the Parishad and Pourshava levels. The local government division within the Ministry of Local Government, Rural Development and Co-operatives formulates all policies and legislation to regulate and oversee local government servants and ensure accountability.

The 18th Constitutional Amendment which was passed in 2010 increased the autonomy of the four provinces and devolved local government from the federal to the provincial government. Provincial governments retain the authority to suspend or remove the heads of elected local governments and control the majority of the flow of finance to local governments.

Timor-Leste has a three-tiered governance structure, including central government, municipal governments, and districts (a total of 12 such structures plus one special administrative region) and villages (with 442 suco councils). Local assemblies and councils are elected but executive bodies are appointed. Most local governments, especially sucos, lack the necessary support.

In the Maldives, the revised constitution ratified in August 2008 includes a chapter on decentralisation administration. Moreover, the Decentralization Act of 2010 defined three types of institutions to be developed: Local Councils (City, Atoll and Island Councils), Women Development Committees (WDCs) and Local Government Authorities (LGAs). Decentralized functions are managed by the elected council. Fiscal devolution is still being implemented.

In Tonga, there is no system of organized self-government (there is no power to raise taxes and define budgets at the local level), but 23 district and 155 town officials are elected by popular vote and report directly to the Prime Minister’s Office. The 14 regions of Nauru are each headed by appointed government representatives. Traditional chieftains remain important components of local governance in countries such as Palau and Nauru. In Fiji, traditional leaders head the 14 provincial councils elected by the indigenous Itukei people, while local administrations have been appointed since the military coup in 2006.

Several states of Palau each have their own elected councils. Fiscal devolution is still being implemented.

In Thailand, there are elected provincial councils with a term of four years. After that, the provinces are allowed to elect their own council. Fiscal devolution is still being implemented.

Japan introduced fiscal rules for local governments in 2015 in order to strengthen local fiscal discipline (Basic Policy on Economic and Fiscal Management and Reforms). In 2016, China announced a major intergovernmental fiscal reform to address the long-standing misalignment of revenue and spending across different levels of government. This reform was completed by 2020 through an Intergovernmental Fiscal Relations Act. In a similar fashion, within the framework of Vietnam’s 2017–2018 Decentralization Programme, the Ministry of the Interior and Safety announced plans for increasing the ratio of local tax versus national taxes to 40%-60% in the long term. Prior to that, in 2016, the Korean Government launched a performance-based budgeting system. Indonesia transferred key responsibilities to sub-national levels in 2015. In 2016, it created the Village Fund following the approval of the ‘Village Law’, where all levels of government must contribute to the Village Fund. In India, the SNG financing system is currently changing, following the reform of the 2017 Goods and Service Tax and the recommendations of the Fourteenth Finance Commission (FFC 2015–2020), which recommended an increase in states’ share from 32% to 42% of the national tax revenues and an improvement to the grants system to provide more fiscal autonomy and incentives to states.

In the Philippines within the framework of the federalization debate, the current modalities of grant allocation are under discussion. The amounts to be transferred as defined by the law have not been implemented (share of local governments’ internal revenue allocated to address inequalities between local governments).

Decentralized functions are managed by the elected council. Fiscal devolution is still being implemented.

In 2017, 94 cities across 14 states received credit ratings from agencies as part of their preparations for issuing municipal bonds.

To provide guidelines and regulations, in 2010 the China State Council issued the ‘Notice of the State Council on Issues concerning Strengthening the Administration of Companies on Local Government Financing Platforms’. In 2014, the China State Council issued Rule No. 43, which laid out strict guidelines for the supervision of local government debt and operating procedures for the public release of local budgets and fiscal data. The amendment of the Public Budget Law allowed provinces to issue bonds for investment projects, subject to approval by the central government. A few wealthier municipalities have been allowed direct access to capital markets under central government supervision.

In OECD countries, as well as in India and the Philippines, local governments may borrow from banks, raise capital and issue bonds within the limits set by national and/or provincial/state finance ministries in the case of federal countries. In Japan and in federal countries, levels of state debt are rather high (e.g. in Australia and India), while in South Korea, Indonesia and the Philippines municipal indebtedness is much more limited. India is revising its sub-sovereign lending policy. Some municipal councils and corporates have managed to raise loans with state government approval.

In the case of China, the ‘social agenda did not receive sufficient attention and pressing social issues such as housing and welfare (…) are given short shrift in plans’, see Denise Yoon, “Starting Strong on the SDGs in Asia: Readiness in South Korea,” 2016, 14.

According to UNDP’s report, “SDG Localization in ASEAN: Experiences in Shaping Policy and Implementation Pathways,” the city needs to receive official endorsement from the provincial government, integrate a cross-departmental steering group to oversee the prospective SDG pilot zone’s development, prepare two documents (the city’s Overall SDG
Planning to 2030 and Specific Actions Plan on the SDGs Innovation Pilot Zone) where local bottlenecks are identified and provide a ‘theme’ for formulating solutions as well as an indicator system aligned with the SDGs. Policy innovation is mandatory and social and civil mobilisation throughout the region are encouraged.

61. Li, Gong, and Shen, “Mapping Alignment of the 13th FYP (2016-2020) with the SDGs (2016-2030).”

62. APAKSI reports having participated in the coordination mechanism, but only at the provincial level. UCLG Surveys.

63. The “National Policies and Strategies for Urban Development towards Sustainable and Competitive. Cities for 2045” (KSNPP) was released in 2015, Jasmine Ali and Jago Dodson, “National Urban Policy. Asia and Pacific Region” (Nairobi, Kenya: UN-Habitat, 2015). The information on the participation of LGAs was extracted from UCLG’s Questionnaire on NULPs (2016).

64. The Joint Memorandum Circular No. 1 of 2018 also encourages local governments to identify and implement programmes, projects and activities that will contribute to the achievement of the SDGs.

66. Other examples include the Bottom-Up Budgeting or KALSADA for road maintenance. See: http://sdg.neda.gov.ph/localization/. UNDP developed another assessment tool, LogGOD, and a scoreboard system (community-based monitoring system), implemented in 77 provinces to complement official data. UNDP, “SDG Localization in ASEAN. Experiences in Shaping Policy and Implementation Pathways,” 52–58.

68. Niti Aayog (Government of India) and Kalinga Institute of Social Sciences (KISS) University, “National Workshop on Building Capacity for Localising SDGs Bhubaneswar, 16-17 February 2018,” 2018. The National Institution for Transforming India to foster cooperative federalism was created in 2015.

72. Comments made by mayors at the 4th Mayors Forum, Guangzhou, December 2018.

73. Pakistan, “Pakistan Voluntary National Review 2019,” 2019; Sumra Kalsoon, “Challenges for Localizing the SDGs in Pakistan,” 2017, Paper submitted to the 3rd International Conference on Public Policy, Singapore, June 28-30 2017, see also UCLG-GTI 2019 Survey. There is a fear of dissolution of local governments (currently there are provinces where elections have been discontinued).

74. A roadmap document and a Cambodian SDG framework was approved in November 2018 by the national government. Sub-national development plans need to be developed. The current national strategy (identifying targets and planning) does not yet involve local governments. LRG inputs are integrated via line ministries and the vertical line is respected in all 25 provinces and the Ministry of Planning also requests input from districts (deconcentrated).

75. In Lao PDR, the national government is working in partnership with local administrations. Every central and sub-national level sector department and agency (from provincial to district level) has been instructed to integrate SDGs into their socio-economic development plans.

76. “SDG implementation is still controlled by highly centralized decisions. The decisions made by national authorities and their State and Regional offices often do not consider the needs of local Development Affairs Offices. See also https://opendevelopmentmyanmar.net/topics/sustainable-development-goals/.

77. Although after the adoption of the new constitution in 2015 local governments in Nepal have in principle more autonomy, they still depend on a national budget and 65% of transfers have been targeted at investments in infrastructures.

78. In Viet Nam, the Prime Minister issued Decision No.62/QG-TTG on 10 May 2017 on the National Action Plan for implementing Agenda 2030 for sustainable development, outlining the responsibilities and roles of central ministries and civil society. Provincial authorities should submit their development plan aligned with the National Action Plan and the SDGs. Focal points for the 2030 Agenda were assigned to the Provincial Departments of Planning and Investment (DPI).

82. A Handbook on the Institutional Architecture for Implementing the SDGs” prepared in 2016 by MSDW revealed the deep fragmentation in the public administration system of Sri Lanka. Mandate-based responsibilities of 51 ministries and 425 statutory institutions were identified for implementing the 169 SDG targets.

83. As discussed in the GLO IV report, intermediary cities are cities between 50,000 and 1,000,000 inhabitants.

85. See: http://www.loginasia.org/. Local Governance Initiative and Network (LOGIN) is a multi-stakeholder network facilitating knowledge exchange and peer learning on topics related to local governance and decentralization, spanning 12 countries in South and East Asia.

86. ASPAC is the regional section of UCLG comprising more than 7,000 local governments in the region. ASPAC has delivered dozens of training sessions on the SDGs, Risk Mitigation, Women and Local Leadership, Better Sanitation, Waste and Mobility throughout the region. Over the past two years (Cambodia, China, Indonesia, South Korea, Malaysia, Pakistan and Thailand), through the South East Asia SDG campaign (2016) it has published roadmaps on the localization of the SDGs (in different languages), supported involvement of local governments in the region with Global Covenant of Mayors for Climate and Energy, and promoted local cooperation. For the regional assessment, see: UCLG ASPAC and Cities Alliance, “City Enabling Environment Rating: Assessment of the Countries in Asia and the Pacific.” For more information, see also: https://uclg-aspac.org/en/.

87. For the Urban Portal see http://www.urbanbdsgplatform.org/. CityNet is an association of urban stakeholders established in 1987 that includes over 135 municipalities in 23 countries. It organized an ‘SDG cluster’ to share best practices, and in 2018 delivered 11 capacity-building activities, as well as city-to-city cooperation and decentralized programmes. See: https://www.citynet.org.

88. UN-ESCAP developed an SDG HelpDesk and a Knowledge Platform (in partnership with CityNet and Seoul). It also developed different forums for dialogue with stakeholders. ASEAN launched a SDGs Fronthrunner Cities Programme (SDGs-FC) under the ASEAN Working Group on Environmentally and Socially Sustainable Cities (AWGESC) funded by the Japan-ASEAN Integration Fund (JAIFF). See: https://sustainabledevelopment.un.org/partnership/?p=29570.

89. UNDP has begun a regional initiative to support the SDG localization and implementation process through the sharing of innovations and lessons learned at multi-government levels to support small Pacific Island states, and is also supporting several initiatives at country level in the majority of countries of the region. For details, see: http://www.pacific.undp.org/content/pacific/en/home/operations/projects/poverty_reduction/sdg-localization. html. In December 2017, the ADB started a programme to support government institutions for localizing the Agenda 2030 (USD 1.5 million), see: https://www.adb.org/en/news-release/13385-a-programme-support-local-government.

90. APEKSI has established working groups on climate change and inclusive cities to gather knowledge and generate dialogue.

91. Tanoto Foundation, in collaboration with LIP (Indonesian Knowledge Agency) and UNDP, established an Indonesian Leadership Academy, a capacity development programme to localize SDGs for local government in Indonesia.

93. A national workshop was organized by the Ministry of Planning on ‘Consultation of the Draft SDGs Implementation Roadmap for Viet Nam’ in Hanoi in November 2017. The two workshops on SDGs were related to PMI LED’s Objectives (SDGs 5, 8,13,16). In March 2018, ACNV hosted the Consultation Workshop for the Action Plan for Viet Nam SDGs by 2030 of Phu Yen Province (with support from GIZ).

102 Conclusions of the Joint Workshop on ‘Enhancing the Capacity of Local Governments in Localising the Sustainable Development Goals’ 8 – 9 April 2019 in Siem Reap, Cambodia.

104 This includes solar power, electric vehicles, CEMS (Community Energy Management System), expansion of sewerage technology, renovation of old housing and transportation facilities, and the creation and transmission of culture and art. See also: http://doc.future-city.jp/pdf/tonkumi_city/yokohama_.pdf. The plan mentions that the 31 provinces have 22 indicators, while the provincial level has 26.

103 Provinces are obviously not equal within the five categories of sustainable development. Most provinces have some shortcomings and there is much room for improvement in terms of achieving sustainable development. For example, although Beijing ranks first in economic development and consumption indicators, it is weak in terms of resource and environmental sustainability. As with provincial level sustainable development, urban sustainable development is not balanced. Most cities have both strengths and weaknesses. The coastal city of Zhihua ranks first once the five categories of sustainable development are balanced out. Beijing and Shenzhen rank second and third respectively, performing less well in terms of social sustainability and people’s livelihoods.

110 Panchayat Development Plans - GPDP) is launched the ‘City Liveability Index (CLI)’ for measuring the quality of life and SDGs in over 110 major cities, UN-India, “Sustainable Development Goals and Urban Local Bodies - The Future We Want,” 2018.

112 The “China Sustainable Development Evaluation Index System Research - Provincial and Large and Medium Cities Sustainable Development Ranking 2018 Annual Report” was released in October 2018. 30 provinces (municipalities, autonomous regions) apart from Tibet, and 100 large and medium-sized cities across the country were ranked according to the sustainability performance indicator. The sustainable development indicator has five main categories: economic development, livelihoods, resource and environment, consumption and environmental governance. The five categories at city level have 22 indicators, while the provincial level has 26.

The Localization of the Global Agendas

How local action is transforming territories and communities

The Sustainable Development Goals (SDGs) and the 2030 Agenda have been widely embraced in the Asia-Pacific (ASPAC) region. Most national governments are working towards including them in several development policies, and planning and monitoring frameworks at the national and subnational levels. There are, however, still significant challenges related to the implementation of the SDGs in the region and advancing localization through enhanced territorial development strategies is one of them. The region’s vast population and geographical area, rapid levels of urbanization and environmental threats all affect the localization of the SDGs.

The ASPAC region, as defined by UCLG, is divided into four sub-regions, namely: Southern and South-western Asia, South-eastern Asia, Eastern and North-eastern Asia and Pacific Island countries. It is home to more than 54% of the world’s population (4.1 billion inhabitants), of which around 50% live in urban areas. And it is one of the most diverse and fastest growing regions in the world, accounting for more than 60% of the world’s economic growth and development.

The UNESCAP 2019 Assessment of progress on SDG implementation stated that although significant improvement has been made on poverty reduction, education, and life expectancy, the ASPAC region will not achieve any of the 17 goals by 2030 on its current trajectory. With national strategies and institutional arrangements that are set to implement the SDGs, countries in the ASPAC region will need massive investment (estimated at USD 1.5 trillion annually) and increased coordinated action to accelerate the attainment of the SDGs.

This regional report presents an overview of the progress made towards the implementation of the 2030 Agenda in ASPAC countries with a focus on the role of local and regional governments. It outlines the significant steps taken by ASPAC countries towards mainstreaming the SDGs into their national planning processes and identifying the national, focal or nodal agencies responsible for coordinating the implementation of the Global Goals. The report also discusses the multilevel governance mechanisms in place for implementing the SDGs.

This report showcases local practices undertaken by local and regional governments to localize global sustainable agendas, in particular the 2030 Agenda, through territorial developmental strategies that address the main challenges faced by cities and territories in the ASPAC region. The report concludes that greater LRG involvement is needed to accelerate the implementation of the SDGs, along with increased commitment from all partners. Integrated territorial approaches are identified as one of the key accelerators. Three major reforms covering governance, financing, and public management are urgently required to boost SDG implementation, thus contributing to reversing the current trajectory and accelerating the region’s transition towards a sustainable future.
